Taco 4900 series separators are designed and fabricated to ASME Code for Unfired Pressure Vessels, Sect. VIII Div. 1.

Prior to shipment all separators are hydrostatically tested to 1.3 times their rated working pressure and certified by an independent Authorized Inspector.

Upon receipt of each separator, the shipping container should be examined for external damage. If the shipping container has been damaged in transit, the contents of the packaging should also be examined prior to acceptance of the shipment. If the separator appears to be damaged the shipment should be refused and/or signed for as damaged. If the separator is damaged, the local Taco representative should be contacted for further instructions.

TO BE INSTALLED BY PROFESSIONAL INSTALLERS ONLY

Abstract — Air Transportation

Taco 4800A series separators are designed for installation in hydronic systems. The purpose of the 4800A separator is the removal of air from the heating or chilled water system. In a heating system application the separator should be mounted in the piping as close as possible to the exit of the boiler and upstream of the pumps in the system. These units are not designed to withstand external piping loads which may be transmitted to the nozzles from the piping system. Should external piping loading requirements be present, confirmation from Taco's Design Engineering department regarding the suitability of the separator's design should be obtained prior to installing this product. External piping must be supported within the design of the external piping system.

When separators are installed, care should be taken to allow access to the ASME name plates, air vent (located at the top of each separator), flushing cock (located at the side of each unit) and drain plug (installed in the bottom of each unit).

All piping to each separator should be installed full size, to match the vessel's connections. Isolation valves on each side of the unit should be installed for future maintenance. The isolation valves are used during maintenance to reduce the loss of system fluid.

See Manning under General section.

4300AD - Air and Dirt or Dirt (D) Separators with or without Switchable On/Off Manual

Installation notes from 4900A - Air Separators in previous paragraphs apply to 4900 Air and Dirt Separators as well. On 4900AD air and dirt separators the drain/blowdown valve located at the bottom of the unit should be piped to drain. This connection should be piped with a full port shutoff valve to a reactor drain during installation.

WARNING: Prior to the initial filling of the system the automatic air vent installed in the top of the separator should be closed to prevent system debris from fouling the venting mechanism. The automatic air vent may be manually closed by turning the orifice screw located in vent face clockwise until seated. Additionally, the flushing cock installed on the side of the separator should be opened to allow the air within the system to exit during the system filling process. The flushing cock should be closed when system fluid first appears to exit the separator from the flushing cock.

Upon the completion of the system filling process the orifice of the automatic vent should be re-opened by turning the screw 1 to 1½ turns counter-clockwise. Do not overturn the screw beyond 1 to 1½ turns.
