Intelligent Transportation Systems Paolo Pagano, 2016-12-01 Intelligent Transport Systems ITS are the way forward for sustainable growth of mobility at all levels local regional national transnational The book reviews the current status of Research Development It includes connected and autonomous cars and buses real world large scale field trials data analysis and assessment of technological solutions Standards and normative aspects in the domain of Electronic Fee Collection and Cooperative Systems oriented to probe data collection safety and non safety critical applications in vehicular networks are studied The book provides the rational perspectives and technical issues for the implementation of ITS solutions in a genuine inter modal scenario taking the example of a Mediterranean seaport actively involved in testing and validation of ITS standards The novelty of this book is that it covers R D standards and pilots all under one cover Rather than stressing the novelty in ICT the authors have presented the need for system level integration assessment of existing standard solutions and piloting experiments in real world industrial scenarios

Designing Mobile Service Systems Els van de Kar, Alexander Verbraeck, 2008 Annotation In this book we describe the design of services from a systems perspective In this systems perspective we explain three elements of the service system that have to be balanced the service concept with the value proposition to the users the organisational network in which stakeholders have to cooperate to develop and deliver the service and the technical architecture that uses information and communication technologies to deliver the content These three main elements of a service system are described in detail and illustrated with examples of services from different domains The elements are integrated into a methodology that describes how to design implement and test mobile service systems The trend is that service systems will become time and place independent and at the same time context dependent Therefore the design of service systems that can be used anytime and anyplace will become common practice Jacket
