WARNINGS

Prior to operating the vehicle, carefully read this Owner's Manual in order to get acquainted with its operational characteristics and safe and proper operation.

1. Fuel is extremely flammable and explosive; therefore it requires special handling precautions:
 - Stop the engine prior to refilling the tank.
 - Fill the tank outdoors; never approach the tank with a lit cigarette, open flame or sparks.
 - Thoroughly wipe off any spilled fuel.
2. The engine should not be run in an enclosed space or nearby entrances to lower-level areas (cellars etc.). Engine exhaust gases are toxic and denser than normal atmospheric air.
3. When starting or running the engine, never touch the ignition coil, high voltage cable, ignition spark plug cap or other parts of the electrical system.
4. The vehicle is equipped with a catalyst exhaust system causing high temperatures. When the engine is running and for some time after it has stopped, do not touch its hot parts: the cylinder, the cylinder head, and exhaust silencer. Also do not touch the brake components.
5. When the engine is running beware of the engine's rotating parts.

NO modification of the vehicle, stripping-off any parts or installing non-original spare parts is permitted. The vehicle owner is specifically warned that any modification to the exhaust system can only result in the vehicle's deteriorated operation, without any positive effects on engine performance and causes higher air pollution.

RIDING SAFETY TIPS

Riding a two-wheeler is simple, yet it requires some skills and experience which can only be accumulated progressively. Prior to each ride, observe the following rules:

1. Check the proper functioning of all vehicle assemblies.
2. When riding, wear light-colored, preferably light-reflective clothes; ride with your lights on; avoid riding in other drivers "blind spots" to prevent danger of other drivers "overlooking" you.
3. Abide by all traffic regulations; above all, adjust your riding speed to the road conditions and your skill level.
4. Do not hand the vehicle over to any inexperienced riders.
5. Prior to changing lanes, always check that this can be done safely, and signal your intention in time. Be very careful when riding through road crossings or passing other vehicles (including parked vehicles).

Tomos 3-3,5, 4-4,5 , 1979 *A Toolbox for the Application of the Rules of Targeting* Tetyana (Tanya) Krupiy, 2016-02-29
How military commanders interpret the rules of targeting impacts not only on whether civilians and civilian objects are harmed in the course of a military operation but also on the scale of harm that ensues Commentators have queried whether military commanders observed the law even when parties to a conflict acted in accordance with mandates to protect civilians as was the case when a coalition of states bombed targets in Libya in 2011 However limited guidance is publicly available on how military commanders apply these rules on the battlefield In order to allow military commanders to exercise judgment in determining what steps they are required to take to spare civilians in a specific set of circumstances the rules of targeting are formulated in an open ended fashion which complicates one s ability to evaluate whether a particular military operation complies with the law By examining case studies ranging from Operation Desert Storm in 1991 to Operation Protective Edge in 2014 this book addresses lacunae in current scholarship It puts forward principles which capture how military commanders deliberate while interpreting what the rules of targeting require in particular scenarios International humanitarian law this book contends places a duty on attackers to assume risk in order to mitigate danger to civilians Drawing on the field of psychology this study provides an explanation of how military commanders assess when circumstances do not permit them to inform civilians about a forthcoming attack *Análisis de fallos en sistemas aeronáuticos* DE SANTIS , AUGUSTO JAVIER, 2015-01-01 An lisis de fallos en sistemas aeron uticos es un libro cuya g nesis es la investigaci n del aspecto t cnico de la industria aeroespacial con una perspectiva interdisciplinaria y una visi n integral de aporte a la seguridad operacional Se trata de una obra de utilidad para todos los sectores y especialidades de la actividad

Caracterización hidrológica y de los procesos erosivos en la cabecera del río Monachil (Granada) Juan María Gisbert Gallego, 2005-02-07 Sierra Nevada constituye una zona extensa y atractiva por su singularidad y complejidad Ocupa casi 170000 ha entre las provincias de Almería y Granada abarcando un total de 60 municipios En su enorme superficie existen desde terrenos casi vírgenes no modificados por el hombre hasta zonas donde se han transformado los ambientes naturales para aprovechar sus recursos La gran diversidad y variedad ecológica y paisajística de este entorno endemismos en su flora y fauna geomorfología peculiar y elevado potencial hidrológico contrastan con la fragilidad y vulnerabilidad de muchos de sus ecosistemas en este sentido hay que recordar que Sierra Nevada es declarada Parque Nacional Ley 3 1999 de 11 de enero siendo el de más reciente creación en España y más extenso 86208 hectáreas Las amenazas de la Sierra han sido

tradicionalmente la caza y recolección furtivas así como el excesivo pastoreo. En los últimos tiempos a estas es preciso añadir la utilización turística recreativa incontrolada en concreto los deportes y turismo invernales desarrollados en la estación de esquí de Pradollano cabecera del río Monachil y parte del D lar. La subcuenca del río Monachil drena una parte de la fachada occidental del macizo de Sierra Nevada y pertenece a la cuenca del río Genil afluente por la margen izquierda del río Guadalquivir. La característica más distintiva de esta cuenca con respecto a las colindantes es el alto grado de antropización a que está sometido su sector medio alto en el que además de pequeñas estaciones hidroeléctricas en cascada se ubica la única estación de esquí del sistema Penibético la de Pradollano. La empresa CETURSA como consecuencia de su adjudicación como organizadora del Campeonato del Mundo de Esquí Alpino de 1996 comenzó las obras de acondicionamiento de la estación a tal evento. Esto supuso un cambio profundo del medio que ha traído consigo un gran desequilibrio en un ambiente tan frágil como es la alta montaña nevadense. Este desajuste se muestra especialmente sensible en lo tocante a la hidrología del río Monachil recursos hídricos riesgo de crecidas fusión de las nieves y procesos erosivos. Por otro lado actualmente y pese a existir un conocimiento fisiográfico e hidrológico aceptable de forma descriptiva para el conjunto del macizo es muy deficiente el análisis de los procesos responsables del funcionamiento hidrológico a escala de subcuenca. De modo general en este trabajo se aborda el análisis de los procesos que influyen en el comportamiento hidrológico de la cabecera del río Monachil así como el estudio de los procesos erosivos desencadenados por las actuaciones en la estación de esquí. Para ello se tratan los siguientes apartados: Establecimiento de las características climáticas generales de la cuenca alta media del río Monachil. Estudio del medio físico atendiendo principalmente a los aspectos hidrológicos y cómo influyen en la erosión. Esto se lleva a cabo mediante la caracterización geomorfológica del rea tanto cualitativa como cuantitativa por metros físicos de la cuenca. Profundización en la caracterización espacio temporal de los caudales circulantes por las estaciones de aforo de Pradollano 2100 m s n m y Dichar 1600 m s n m. Estudio de los eventos de máxima energía avenidas recursos y estimación de las distintas partidas del balance precipitación ETR sublimación escorrentía infiltración y de la escorrentía superficial subterránea deshielo subsuperficial. Para ello se aplicarán diferentes metodologías y modelos que aportarán información al respecto. Estudio de los procesos erosivos y formas resultantes cartografía para pasar a la estimación de la erosión mediante los análisis de sedimentos en suspensión y la aplicación de modelos paramétricos tipo USLE y MUSLE. Esto permitirá determinar los lugares con erosión más intensa evaluar la superficie afectada por el proceso erosivo delimitar las causas de la misma y evaluar la eficacia de las medidas correctoras y protectoras propuestas para finalizar con una explicación de la evolución de los procesos erosivos que se han desarrollado en este sector en la última década.
