Navneet Singh, Java interview questions often cover a broad range of topics including core Java concepts object oriented
programming principles data structures algorithms Java APIs and best practices Here are some common Java interview
questions along with sample answers What is Java Java is a high level object oriented programming language developed by
Sun Microsystems now owned by Oracle It is designed to be platform independent allowing developers to write code once
and run it on any Java enabled platform without recompilation What are the main features of Java Some of the main features
of Java include Platform independence Java programs can run on any platform with a Java Virtual Machine JVM Object
oriented Java supports object oriented programming principles such as encapsulation inheritance and polymorphism
Robustness Java provides strong memory management exception handling and type checking mechanisms to ensure robust
and reliable code Multi threading Java supports concurrent execution of multiple threads allowing developers to write
scalable and responsive applications Portability Java programs are portable across different platforms making them suitable
for developing cross platform applications What is the difference between JDK JRE and JVM JDK Java Development Kit is a
software development kit that includes tools for developing and compiling Java applications such as the Java compiler javac

and the Java runtime environment JRE JRE Java Runtime Environment is a runtime environment that provides the necessary libraries and components to run Java applications It includes the JVM Java Virtual Machine and core Java libraries JVM Java Virtual Machine is an abstract computing machine that provides an execution environment for Java bytecode It interprets and executes Java bytecode instructions and manages memory threads and other runtime aspects of Java applications What is the difference between abstract class and interface in Java An abstract class is a class that cannot be instantiated and may contain abstract methods methods without a body as well as concrete methods It can also contain instance variables and constructors Subclasses of an abstract class must implement all abstract methods or be declared abstract themselves An interface is a reference type in Java that defines a contract of methods that a class must implement It can only contain constant variables and method signatures without method bodies A class can implement multiple interfaces but can only extend one abstract class What is the difference between Array List and LinkedList in Java Array List is implemented as a dynamic array meaning that it stores elements in a contiguous memory location and supports random access to elements using an index It is efficient for accessing elements by index but less efficient for inserting or removing elements from the middle of the list LinkedList is implemented as a doubly linked list meaning that it stores elements as nodes with references to both the previous and next nodes It is efficient for inserting or removing elements from the middle of the list but less efficient for random access These are just a few examples of Java interview questions Depending on the role and level of the interview questions may cover more advanced topics such as design patterns concurrency memory management and performance optimization It s important to thoroughly prepare for interviews by reviewing core Java concepts practicing coding exercises and gaining hands on experience with Java programming
