Virus Structure Robert W Horne:

Virus Structure [By] Robert W. Horne Robert W. Horne,1974 *Virus Structure* Robert W. Horne,2014-06-28 Virus Structure describes the physical characteristics of isolated viruses that represent typical structural groups with particular reference to those features analyzed with the aid of the electron microscope For descriptive purposes the book has been divided into sections starting with the small icosahedral viruses and leading to the larger and more sophisticated structures regardless of whether they are animal plant or bacterial viruses These include double stranded DNA icosahedral viruses herpesvirus viruses with helical symmetry and viruses with complex or a combination of symmetries Many common architectural features will be found in those viruses selected for discussion in each of the sections and for these reasons the introduction places some emphasis on the symmetry elements rather than the shapes of viruses The mechanism by which viruses enter host cells and the events that follow once the cell has been infected are only mentioned briefly as the virus host interaction is a relatively complex one **Methods in Virology** Karl Maramorosch,Hilary Koprowski,2014-06-28 Methods in Virology Volume III focuses on the advancements of methods employed in virology including immunological microscopic and serological techniques and transformation assays The selection first offers information on the analysis of protein constituents and lipid components of viruses Discussions focus on the applications of the existing methodology to lipid containing viruses physical methods for the characterization of virus proteins renaturation of virus proteins and reconstitution of viruses and chemical methods for the characterization of virus proteins The text then elaborates on RNA polymerase immunological techniques for animal viruses and serological techniques for plant viruses The book tackles the plaque assay of animal viruses transformation assays and the methods for selecting RNA bacteriophage Topics include identification of the nucleic acid assay methods for particular viruses general consideration of the plaque assay method virus dilution media and procedures monolayer assay methods and incubation and staining of plates and counting of plaques The manuscript also takes a look at the structural studies of viruses microscopic techniques electron microscopy of isolated virus particles and their components and the application of thin sectioning The selection is a vital source of data for researchers interested in the methods employed in virology *British Medical Bulletin* ,1962 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),1965 Current Catalog National Library of Medicine (U.S.),1979 First multi year cumulation covers six years 1965 70 Medical and Health Care Books and Serials in Print ,1986 Intracellular Parasitic Protozoa Masamichi Aikawa,Charles R. Sterling,1974 **Nobel Prizes: Protein Structure, Ethology And Cell Architecture** Erling Norrby,2025-09-12 The present book offers an in depth analysis of the Nobel Prize in chemistry in 1972 and the Nobel Prizes in physiology or medicine 1972 74 using the unique Nobel archive materials that can become available by permission after 50 years of secrecy The perspective by the author is unique for the years 1973 74 since he himself was an adjunct member of the Nobel Prize committee at the Karolinska Institute during these years and he participated in providing

the recommendation to the Medical Faculty which took the final decision The Nobel Prize in chemistry in 1972 recognized the insights gained into the central problem of protein folding The prize was split with one half to Christian B Anfinsen and the other half to Stanford Moore and William H Stein Over time important further insights have been gained into this important field of research as discussed in the book As late as 2024 another Nobel Prize in chemistry for computational protein design was awarded to two scientists from the UK and one from the USA The prize in physiology or medicine in 1972 recognized the important characterization of the structure of immunoglobulin G by Gerald M Edelman and Rodney R Porter Their work provided a foundation for many subsequent Nobel Prizes in physiology or medicine recognizing the importance of several critical discoveries in the complex and important field of immunology The Nobel Prize in physiology or medicine in 1973 was exceptional It recognized the founding fathers of the field of animal behavior ethology Karl von Frisch Konrad Lorenz and Nikolaas Tinbergen It was concluded at the time that insights gained in this field were of potential value for the development of psychiatric care of patients in human medicine Finally the 1974 Nobel prize in physiology or medicine recognized the founding fathers of the science of architecture of cells The scientists Albert Claude Christian de Duve and George E Palade pioneered cell biology studies during the 1950s and 1960s at The Rockefeller Institute later The Rockefeller University Insights into the detailed structure of the multitude of cellular organelles and the consequential possibilities to determine their unique biochemical structures have revolutionized the understanding of the way cells operate and hence given insights into functional errors that may lead to diseases

Nobel Prizes and Life Sciences Erling Norrby, 2010 The Nobel Prizes in natural sciences have achieved the reputation of being the ultimate accolade for scientific achievements This book gives a unique insight into the selection of Nobel Prize recipients in particular the life sciences The evolving mechanisms of selection of prize recipients are illustrated by reference to archives which have remained secret for 1 year Many of the prizes subjected to particular evaluation concern awards given for discoveries in the field of infectious diseases and the interconnected field of genetics The book illustrates the individuals and environments that are conducive to scientific creativity Nowhere is this enigmatic activity the mime mover in advancing the human condition highlighted as lucidly as by identification individuals worthy of Nobel Prizes Book Jacket

Nobel Prizes: Genes, Viruses And Cellular Signaling Erling Norrby, 2022-09-05 The present book discusses the Nobel Prizes in physiology or medicine from 1969 to 1971 The 1969 prize recognized Max Delbrück Alfred Hershey and Salvador Luria Their pioneering studies of viruses infecting bacteria bacteriophages from the mid 1940s through the 1950s laid the foundation for the wide field of molecular biology The nature of the gene was finally understood Insights into the biochemistry of the critical information molecules the nucleic acids opened wide vistas for interpreting their expression and the interaction of their

product with other gene products The contact between the endings of a nerve and a target cell the synapse has always stirred the imagination of scientists A number of the insights gained have been highlighted by Nobel Prizes in physiology or medicine In 1970 the prize recognized Bernard Katz Ulf von Euler and Julius Axelrod They had revealed how signaling substances in the nerve terminals were stored in packages released by membrane fusion and inactivated or reused by particular metabolic events The recipient of the 1971 Nobel Prize in physiology or medicine was a single scientist Earl Sutherland He had identified critical molecules in cells that allow signals elicited at their surface via a number of internal steps to influence the expression of specific genes in the nucleus The new kind of information transmitting molecules were referred to as secondary messengers They represent a critical part of a highly complex network of signaling controlling the operative conditions of the cell by adjustments of the so called intermediary metabolism The widening insights into functions of specialized cells and their complex interactions have led to the development of many kinds of remedies *Catalog of Copyright Entries.
