2. What are characteristics of realistic mathematics education?

Realistic mathematics education has five characteristics: (1) use real-life contexts as a starting point for learning; (2) use models as a bridge between abstract and real, that help students learn mathematics at different levels of abstractions; (3) use student's own production or strategy as a result of their doing mathematics; (4) interaction is essential for learning mathematics between teacher and students, students and students; and (5) connection to among strands, to other disciplines, and to meaningful problems in the real world.

3. How is realistic approach is related to the constructivist approach?

The realistic approach is similar to the socio-constructivist approach, except in socio-constructivist does not produce heuristics that can guide the development of instructional activities for students. In other words, in socio-constructivist approach, the teacher does not use heuristics, a method of solving problems by learning from past experience and investigating practical ways of finding a solution. In RME, it is known as guided reinvention.

4. How to design mathematics lessons based on the realistic approach?

The mathematics lessons that will be designed should represents all of the characteristics of RME especially in the material, activity, and assessment part of lesson plan. The way of embed these characteristics into the lesson plan components can be seen in the summary of previous section and an example of complete lesson plan that is designed based on the realistic approach can be seen in the appendix.

Australia and the Asia-Pacific Erica Frydenberg, Andrew J. Martin, Rebecca J. Collie, 2017-03-07 Around the globe there is a growing awareness of the importance of addressing students social and emotional development and wellbeing during schooling. Although the bulk of the work in this area has been conducted in North America and Europe, there is now a burgeoning interest in this topic in Australia and the wider Asia Pacific. This book is the first ever to provide a timely and important collection of diverse perspectives on and approaches to social and emotional learning in the Australian and Asia Pacific context. Adopting a broad view of social and emotional learning, the book explores positive psychology, belonging, teachers' professional development, pre-service training and post-initial training in Australia and in neighbouring communities such as China, Hong Kong, Korea, Singapore, New Zealand, Fiji and other Pacific nations. Frydenberg, Martin and Collie have provided an incredible service by bringing together in a single well-planned scholarly volume an incredible and well-balanced group of senior and early career cutting-edge researchers from Australia, Asia and the Asia Pacific area, tackling approaches and key issues of social and emotional learning. Their much-needed volume links research on key factors such as differing perspectives, measurement issues, the identification of at-risk children, teachers' social and emotional development and these and other across the cultures of an increasingly vibrant and developing geographic region. It is indeed encouraging to gain the sense of depth and breadth of ongoing research that the volume gives. John Roodenburg PhD, FAPS, MCEDP, MCCOUNSP, Monash University Melbourne. Social and Emotional Learning is understood to be a crucial part of the school curriculum. This book covers the field with a refreshing focus on work being done in Australia and in neighbouring countries. For school psychologists, the book helps us to understand how SEL can help at every level, from working with individuals, small groups, whole classes or with the entire school. Our work with vulnerable students individually or in small groups is always more effective when embedded in the broader context of Social and Emotional Learning. Paul Bertoia FAPS, MCEDP, Senior School Psychologist. This collected volume of researchers from Australia and the Asia Pacific provides a thorough review of important educational, social and emotional development issues for practitioners and researchers around the world. Readers will greatly benefit from the breadth and depth of treatment in each of the topics covered. Kit Tai Hau PhD, Choh Ming Li Professor of Educational Psychology, The Chinese University of Hong Kong. **RME, 1953 Research on e-Learning and ICT in Education** Charalampos Karagiannidis, Panagiotis Politis, Ilias Karasavvidis, 2014-08-07 An essential text for researchers and academics seeking the most comprehensive and up-to-date coverage of all aspects of e-learning and ICT in education, this book is a multidisciplinary forum covering technical, pedagogical, organizational, instructional and policy aspects of the topic. Representing the best peer-reviewed papers from the 8th Panhellenic Conference on ICT in Education, special emphasis is given to applied research relevant to educational practice and guided by the educational realities in schools, colleges, universities and informal learning organizations. The volume encompasses the current trends and issues which determine and inform the integration of ICT in educational practice, including educational software, educational games.

Designing Learning Environments for Developing Understanding of Geometry and Space Richard Lehrer, Daniel Chazan, 2012-11-12 This volume reflects an appreciation of the interactive roles of subject matter teacher student and technologies in designing classrooms that promote understanding of geometry and space Although these elements of geometry education are mutually constituted the book is organized to highlight first the editors vision of a general geometry education second the development of student thinking in everyday and classroom contexts and third the role of technologies Rather than looking to high school geometry as the locus and all too often the apex of geometric reasoning the contributors to this volume suggest that reasoning about space can and should be successfully integrated with other forms of mathematics starting at the elementary level and continuing through high school Reintegrating spatial reasoning into the mathematical mainstream indeed placing it at the core of K 12 mathematics environments that promote learning with understanding will mean increased attention to problems in modeling structure and design and reinvigoration of traditional topics such as measure dimension and form Further the editors position is that the teaching of geometry and spatial visualization in school should not be compressed into a characterization of Greek geometry but should include attention to contributions to the mathematics of space that developed subsequent to those of the Greeks This volume is essential reading for those involved in mathematics education at all levels including university faculty researchers and graduate students
