Equus and its Close Relatives from Five Continents Raymond Louis Bernor, Gina Marie Semperebon, Florent Rivals, Leonardo Santos Avilla, Eric Scott, 2020-03-12 Evolution of the horse has been an often cited primary example of evolution as well as one of the classic and important stories in paleontology for over a century and a half due to their rich fossil record across 5 continents North America South America Europe Asia and Africa The recent horse has served a profound role in human ancestry including agriculture commerce sport transport warfare and in prehistory for the subsistence of humans Many studies have examined the evolution of the Equidae and chronicled the striking changes in skulls dentition limbs and body size which have long been perceived to be a response to environmental shifts through time Most comprehensive studies heretofore have 1 focused on the Great Transformation changes that occurred in the early Miocene 2 involved tracking long term diversity or paleoecological trends on a single continent or within a geographical locality or 3 concentrated on the 3 toed hipparions The Plio Pleistocene evolutionary stage of horse evolution is punctuated by the great climatic fluctuations of the Quaternary beginning 2 6 Ma which influenced Equus evolution biogeographic dispersion and adaptation on a nearly global scale The evolutionary biology of Equus evolution across its entire range remains relatively poorly understood and often highly controversial Some of this lack of understanding is due to assumptions that have arisen because of the relatively derived craniodental and postcranial anatomy of Equus and its close relatives

which has seemed to imply that that these forms occupied relatively homogenous and narrow dietary and locomotor niches notions that have not been adequately addressed and rigorously tested Other challenges have revolved around teasing apart environmentally driven adaptation versus phylogenetically defined morphological change Geochronologic age control of localities geographic provinces and continents has improved but in no way is absolute and can be reexamined in our proposed volume Temporal resolution for paleodietary paleohabitat and paleoecological interpretations are also challenging for understanding the evolution of Equus Our proposed volume attempts to assemble a group of experts who will address multiple dimensions of Equus evolution in time and space

Antiracist Journalism Andrea Wenzel, 2023-11-14 Across the United States newsrooms are grappling with systemic racism in their organizations and the media industry Many have implemented diversity equity and inclusion DEI initiatives or made other attempts to confront past and present biases in pursuit of greater equity Are such efforts merely performative or are any transforming norms and power structures What would it take to hold newsrooms truly accountable Andrea Wenzel provides a critical look at how local media organizations in the Philadelphia area are attempting to address structural racism She focuses on two established majority white newsrooms the Philadelphia Inquirer and the public radio station WHYY and two start ups where at least half the staff identify as Black Indigenous or people of color BIPOC Resolve Philly and Kensington Voice Drawing on more than five years of field research Wenzel charts how these outlets have pursued a range of interventions such as tracking the diversity of sources examining reporting and editing practices and working with community members to gain input to varying degrees of success Wenzel argues that institutional and systemic transformation will be possible only through the establishment of structures that facilitate holding those with more power responsible for listening to and addressing the needs and concerns of those with less Offering recommendations for building infrastructure that enables sustainable accountability *Antiracist Journalism* is an important book for everyone interested in making local journalism more equitable
