Respiration and Crop Productivity Jeffrey S. Amthor, 2012-12-06

Respiration is a large and important component of the carbon economy of crops There are already several good books dealing with the biochemistry and physiology of plant respiration but there are none I know of that are devoted to the relationship between respiration and crop productivity although this relationship is more and more frequently being studied with both experiment and simulation Crop physiology books do cover respiration of course but the treatment is limited The purpose of the present book is to fill this void in the literature The approach taken here is to use the popular two component functional model whereby respiration is divided between growth and maintenance components After thoroughly reviewing the literature I came to the conclusion that at present this is the most useful means of considering respiration as a quantitative component of a crop's carbon economy This functional distinction is used as the framework for describing respiration and assessing its role in crop productivity Discussions and critiques of the biochemistry and physiology of respiration serve primarily as a means of more fully understanding and describing the functional approach to studying crop respiration It is assumed that the reader of this book is familiar with the fundamentals of plant physiology and biochemistry The research worker in crop physiology should find this an up to date summary of crop respiration and the functional model of respiration This book is not however a simple review of existing data

Wearable Sensing and Intelligent Data Analysis for Respiratory Management Rui Pedro Paiva, Paulo de Carvalho, Vassilis Kilintzis, 2022-05-21

Wearable Sensing and Intelligent Data Analysis for Respiratory Management highlights the use of wearable sensing and intelligent data analysis algorithms for respiratory function management offering several potential and substantial clinical benefits. The book allows for the early detection of respiratory exacerbations in patients with chronic respiratory diseases allowing earlier and therefore more effective treatment. As such the problem of continuous non-invasive remote and real time monitoring of such patients needs increasing attention from the scientific community as these systems have the potential for substantial clinical benefits promoting P4 medicine: personalized, participative, predictive and preventive.

Wearable and portable systems with sensing technology and automated analysis of respiratory sounds and pulmonary images are some of the problems that are the subject of current research efforts; hence this book is an ideal resource on the topics discussed. Presents an up-to-date review and current trends and hot topics in the different sub-fields: e.g. wearable technologies, respiratory sound analysis, lung image analysis etc. Offers a comprehensive guide for any research starting to work in the field. Presents the state of the art of each sub-topic where the main works in the literature are critically reviewed and discussed along with the main practices and techniques in each area.
