Scientific and Technical Aerospace Reports , 1995 *Nuclear Science Abstracts* , 1974-07 Integrated Circuit Design. Power and Timing Modeling, Optimization and Simulation Bertrand Hochet, Antonio J. Acosta, Manuel J. Bellido, 2003-08-02 The International Workshop on Power and Timing Modeling Optimization and Simulation PATMOS 2002 was the 12th in a series of international workshops 1 previously held in several places in Europe PATMOS has over the years evolved into a well

established and outstanding series of open European events on power and timing aspects of integrated circuit design. The increased interest especially in low power design has added further momentum to the interest in this workshop. Despite its growth the workshop can still be considered as a very focused conference featuring high level scientific presentations together with open discussions in a free and easy environment. This year the workshop has been opened to both regular papers and poster presentations. The increasing number of worldwide high quality submissions is a measure of the global interest of the international scientific community in the topics covered by PATMOS. The objective of this workshop is to provide a forum to discuss and investigate the emerging problems in the design methodologies and CAD tools for the new generation of IC technologies. A major emphasis of the technical program is on speed and low power aspects with particular regard to modeling characterization design and architectures. The technical program of PATMOS 2002 included nine sessions dedicated to most important and current topics on power and timing modeling optimization and simulation. The three invited talks try to give a global overview of the issues in low power and or high performance circuit design.

OpenMP Shared Memory Parallel Programming Rudolf Eigenmann, Michael J. Voss, 2003-05-15

This book contains the presentations given at the Workshop on OpenMP Applications and Tools WOMPAT 2001. The workshop was held on July 30 and 31 2001 at Purdue University West Lafayette Indiana USA. It brought together designers users and researchers of the OpenMP application programming interface. OpenMP has emerged as the standard for shared memory parallel programming. For the first time it is possible to write parallel programs that are portable across the majority of shared memory parallel computers. WOMPAT 2001 served as a forum for all those interested in OpenMP and allowed them to meet share ideas and experiences and discuss the latest developments of OpenMP and its applications. WOMPAT 2001 was co sponsored by the OpenMP Architecture Review Board ARB. It followed a series of workshops on OpenMP including WOMPAT 2000 EWOMP 2000 and WOMPEI 2000. For WOMPAT 2001 we solicited papers formally and published them in the form of this book. The authors submitted extended abstracts which were reviewed by the program committee. All submitted papers were accepted. The authors were asked to prepare a final paper in which they addressed the reviewers comments. The proceedings in the form of this book were created in time to be available at the workshop. In this way we hope to have brought out a timely report of ongoing OpenMP related research and development efforts as well as ideas for future improvements.

IBM Problem Determination Tools for z/OS Rufus Credle, Vikram Manchala, Dana Shelton, Kenichi Yoshimura, IBM Redbooks, 2013-01-27

IBM Problem Determination PD Tools consists of a core group of IBM products that are designed to work with compilers and run times to provide a start to finish development solution for the IT professional. This IBM Redbooks publication provides you with an introduction to the tools guidance for program preparation to use with them an overview of their integration and several scenarios for their use. If an abend occurs during testing Fault Analyzer enables the

programmer to quickly and easily pinpoint the abending location and optionally the failing line of code Many times this information is all the programmer requires to correct the problem However it might be necessary to delve a little deeper into the code to figure out the problem Debug Tool allows the programmer to step through the code at whatever level is required to determine where the error was introduced or encountered After the code or data is corrected the same process is followed again until no errors are encountered However volume testing or testing with multiple terminals is sometimes required to ensure real world reliability Workload Simulator can be used to perform this type of testing After all of the tests are completed running the application by using Application Performance Analyzer can ensure that no performance bottlenecks are encountered It also provides a baseline to ensure that future enhancements do not introduce new performance degradation into the application This publication is intended for z OS application developers and system programmers
