Excerpt from Syllabus for General Mathematics 1 2 and 3 of the Programme of Studies for the High School The courses in General Mathematics are offered to meet the needs of students whose special aptitudes or interests do not lie in the field of Mathematics but for whom nevertheless some knowledge of fundamental mathematical concepts and the application of these to practical situations of life will be of value It is also a necessary course for students entering the senior high school with C standing from Grade IX who desire ultimately to proceed with academic rather than with general subjects and who can therefore profit from remedial work in Mathematics before undertaking the courses in Algebra 1 and Geometry 1 To meet the needs of such a divergent group of students the courses in General Mathematics must contain a wide variety of topics from which the teacher may select those most appropriate to the needs of his class He may give the course a commercial technical or academic bias As suggested by the Regulations of the Department of Education for the year ending June 1939 he may dilute the course if he finds it too difficult for his particular class It is fundamental that the teacher decide early in the school year the particular bias the class will follow and to treat the course accordingly The integration that distinguishes a course in General Mathematics from the older courses in specialized subject matter is to be sought not so much in the content as in the classroom procedure for applying this content in a practical way to the solution of problems on which the student is working It cannot be stated too emphatically that the teacher is not required to cover any prescribed minimum or core of work The really important thing is that students be kept working at Optimum efficiency throughout the year on meaningful problems which have some practical interest for them The aim is not to enforce a standard but to increase the students understanding and practical efficiency About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works      Math Course 3 New York Mcdougal Littell,2006-11-27
