E. F. Matthews, 2018-01-18 The overall aim of this volume is to review critically the current state of and future prospects for developments in viral taxonomy Most of the contributors to this volume have had substantial period of service on the Executive Committee and sub committees of the International Committee on Taxonomy of Viruses ICTV **The Life of a Virus** Angela N. H. Creager, 2002 We normally think of viruses in terms of the devastating diseases they cause from smallpox to AIDS But in *The Life of a Virus* Angela N H Creager introduces us to a plant virus that has taught us much of what we know about all viruses including the lethal ones and that also played a crucial role in the development of molecular biology Focusing on the tobacco mosaic virus TMV research conducted in Nobel

laureate Wendell Stanley's lab Creager argues that TMV served as a model system for virology and molecular biology much as the fruit fly and laboratory mouse have for genetics and cancer research. She examines how the experimental techniques and instruments Stanley and his colleagues developed for studying TMV were generalized not just to other labs working on TMV but also to research on other diseases such as poliomyelitis and influenza and to studies of genes and cell organelles. The great success of research on TMV also helped justify increased spending on biomedical research in the postwar years partly through the National Foundation for Infantile Paralysis's March of Dimes, a funding priority that has continued to this day.

Environmental Microbiology Research Trends George V. Kurladze, 2007. It includes the structure, activities, and communal behaviour of microbial communities; microbial interactions and interactions with plants, animals, and non-living environmental factors; population biology and clonal structure; microbes and surfaces; adhesion and biofouling; responses to environmental signals and stress factors; growth and survival; modelling and theory; development; microbial community genetics and evolutionary processes; microbial physiological, metabolic, and structural diversity; pollution microbiology; extremophiles and life in extreme and unusual, little explored habitats; primary and secondary production; element cycles and biogeochemical processes; and microbially influenced global changes.

Communicating in Risk, Crisis, and High Stress Situations: Evidence-Based Strategies and Practice Vincent T. Covello, 2021-12-10

COMMUNICATING IN RISK CRISIS AND HIGH STRESS SITUATIONS LEARN THE UNIFYING PRINCIPLES BEHIND RISK CRISIS AND HIGH STRESS COMMUNICATION WITH THIS STATE OF THE ART REFERENCE WRITTEN BY A MAJOR LEADER IN THE FIELD. *Communicating in Risk Crisis and High Stress Situations: Evidence Based Strategies and Practice* is about communicating with people in the most challenging circumstances: high stress situations characterized by high risks and high stakes. The ability to communicate effectively in a high stress situation is an essential communication competency for managers, engineers, scientists, and professionals in every field who can be thrust into demanding situations complicated by stress. Whether you are confronting an external crisis, an internal emergency, or leading organizational change, this book was written for you. *Communicating in Risk Crisis and High Stress Situations* brings together in one resource proven scientific research with practical, hands-on guidance from a world leader in the field. The book covers such critical topics as trust, stakeholder engagement, misinformation, messaging, and audience perceptions in the context of stress. This book is uniquely readable, thorough, and useful thanks to features that include evidence-based theories and concepts that underlie and guide practice; tools and guidelines for practical and effective planning and application; experience-based advice for facing challenges posed by mainstream and social media; provocative case studies that bring home the key principles and strategies; illuminating case diaries that use the author's breadth and depth of experience to create extraordinary learning opportunities. The book is a necessity for managers, engineers, scientists, and others who must communicate difficult technical

concepts to a concerned public It also belongs on the bookshelves of leaders and communicators in public and private sector organizations looking for a one stop reference and evidence based practical guide for communicating effectively in emotionally charged situations Written by a highly successful academic consultant and trainer the book is also designed as a resource for training and education

Virus Discovery by Metagenomics: The (Im)possibilities Bas E. Dutilh, Alejandro Reyes, Richard J. Hall, Katrine L. Whiteson, 2017-10-25 Since the late 1800s the discovery of new viruses was a gradual process Viruses were described one by one using a suite of techniques such as electron microscopy and viral culture Investigators were usually interested in a disease state within an organism and expeditions in viral ecology were rare The advent of metagenomics using high throughput sequencing has revolutionized not only the rate of virus discovery but also the nature of the discoveries For example the viral ecology and etiology of many human diseases are being characterized non pathogenic viral commensals are ubiquitous and the description of environmental viromes is making progress This *Frontiers in Virology Research Topic* showcases how metagenomic and bioinformatic approaches have been combined to discover classify and characterize novel viruses
