Active and Healthy Aging and Quality of Life: Interventions and Outlook for the Future Yulan Lin, Waqas Sami, Mila Nu Nu Htay, Sudip Bhattacharya, 2024-04-15 The continuous growth of older adult populations as a consequence of demographic changes is a huge challenge. To prevent costly and negative impacts on the population as a whole, it is crucial that societies increase their knowledge of promoting good health among older adults to promote good health and a better quality of life in their later years. Active aging is the process of optimizing opportunities for health, participation, and security in order to enhance quality of life as people age. An active and healthy life has remained one of the most important aspirations for all people, both young and older adults alike. This ambition has become a genuine possibility for many due to a rising life expectancy among people of diverse attributes across the world. While celebrating longer life and with more financial security in later life than ever before, we need to challenge how these aspirations can be sustained through our own behavioural responses and through public policy, institutional reforms, and innovations. The challenge is to identify, recommend, and promote strategies and interventions that

stimulate and sustain the activity independence and health of people of all ages especially older adults and in the process promote the well being and quality of life of people and make public welfare systems more sustainable *Bridge Maintenance, Safety, Management, Life-Cycle Sustainability and Innovations* Hiroshi Yokota, Dan M. Improving Sustainable Water Governance Wietske Medema,Chengzi Chew,Jan Franklin Adamowski,Igor Mayer,Arjen Wals,2020-04-28 The sustainable governance of water resources relies on processes of multi stakeholder collaborations and interactions that facilitate knowledge co creation and social learning Governance systems are often fragmented forming a barrier to adequately addressing the myriad of challenges affecting water resources including climate change increased urbanized populations and pollution Transitions towards sustainable water governance will likely require innovative learning partnerships between public private and civil society stakeholders It is essential that such partnerships involve vertical and horizontal communication of ideas and knowledge and an enabling and democratic environment characterized by informal and open discourse There is increasing interest in learning based transitions Thus far much scholarly thinking and to a lesser

degree empirical research has gone into understanding the potential impact of social learning on multi stakeholder settings The question of whether such learning can be supported by forms of serious gaming has hardly been asked This Special Issue critically explores the potential of serious games to support multi stakeholder social learning and collaborations in the context of water governance Serious games may involve simulations of real world events and processes and are challenge players to solve contemporary societal problems they therefore have a purpose beyond entertainment They offer a largely untapped potential to support social learning and collaboration by facilitating access to and the exchange of knowledge and information enhancing stakeholder interactions empowering a wider audience to participate in decision making and providing opportunities to test and analyze the outcomes of policies and management solutions Little is known about how game based approaches can be used in the context of collaborative water governance to maximize their potential for social learning While several studies have reported examples of serious games there is comparably less research about how to assess the impacts of serious games on social learning and transformative change

Biocontrol Agents and Natural Compounds against Mycotoxinogenic Fungi Florence Mathieu, Selma P. Snini, 2020-11-25 Mycotoxins are toxic secondary metabolites produced by fungi They cause deleterious effects on humans animals and plants More than one hundred mycotoxins are known which contaminate food and feed raw materials Fungal infection and mycotoxin contamination can occur directly in fields pre harvest stage during storage or during industrial processing post harvest stage Given the proven toxicity of mycotoxins and their widespread distribution it is necessary to prevent their occurrence in food and feed To limit mycotoxin contamination several techniques can be adopted at the pre harvest or post harvest stages These techniques can reduce mycotoxin concentration through fungal growth reduction or mechanisms leading to mycotoxin degradation or mycotoxin detoxification i.e. reduction of the toxicity Until very recently fungicides were favored to limit mycotoxin contamination by reducing fungal growth Nonetheless the sanitary and environmental impacts of these products and their effects on food quality encourage the development of alternative strategies based on biocontrol agents BCAs or natural compounds Moreover in some cases fungal growth reduction can stimulate mycotoxin production The focus of this Special Issue of Toxins is to gather the most recent advances related to reducing mycotoxin contamination in food and feed using BCAs and natural compounds In this context two main types of approaches can be proposed Preventive methods that could be applied in the field during storage or during industrial processing and curative methods that detoxify contaminated matrices by eliminating the produced mycotoxin

Public Health, Governance, Green Environment and Economy, 3rd edition Suleman Sarwar, Dalia Streimikiene, Rida Waheed, Abdul Rauf, 2025-10-10

Sustainable economic growth is important due to its implications for the ecosystem natural resources and human development Public health is also a key factor in developing a sustainable economy and it is a national asset because of its impact on labor supply and productivity Health conditions depend on various factors such as environmental hazards availability of public facilities economic conditions pandemics etc

Green energy has an association with health as it guarantees a clean environment. Such measures are necessary to improve the public's mental and physical health, leading to sustainable economic growth. Hence, green energy governance and health are the potential avenues to enhance public health, promoting sustainable economic growth. Good health guarantees higher economic growth as when more people are healthy and suitable to work, the labor supply will increase and the economy grows. Likewise, when health improvements are made, the productivity of people improves because healthy people prove to be more active both physically and mentally. When overall productivity improves, the economy would also benefit. However, some factors affect public health, including environmental degradation. Green energy helps to improve overall health by the reduction in emission of dangerous gasses. Preservation of balance in terms of atmospheric gasses becomes possible through green energy and a clean environment, resulting in fewer diseases and deaths, making the economy grow by providing healthier people with higher productivity. Previous studies tried to investigate the channel through which public health can affect economic growth and added environmental pollution as a health problem. However, the literature sheds light on the importance of a clean environment for the economy by checking its impact on public health. Although there is a lack of investigation into how governance and green energy can influence public health, which lead to increase the economic growth, calling scholars to add this beneficial factor in future research. This Research Topic focuses on sustainable economic growth through public health and green energy to add valuable information to the current knowledge in green energy, environment, public health, as well as sustainable economic growth. The main focus of research for this topic is emerging economies as these are the most vulnerable in terms of health and energy issues and economic growth sustainability. It is assumed that the use of nonrenewable energy has a high environmental impact on health. Hence, there should be some practical solution to improve health without interrupting the energy supply. As a result, scholars must hypothesize and test new solutions, and this Research Topic is an attempt to do so. Topics covered by us would be governance, green energy, environment, and sustainable economic growth. This Research Topic provides an avenue for discussion as well as practical research on areas related to green energy, public health, sustainable environment, sustainable economic growth, and energy-related issues of developed and developing economies.
