Introduction Peter Atkins, 2015-02-26 Most people remember chemistry from their schooldays as largely incomprehensible a subject that was fact rich but understanding poor smelly and so far removed from the real world of events and pleasures that there seemed little point except for the most introverted in coming to terms with its grubby concepts spells recipes and rules Peter Atkins wants to change all that In this Very Short Introduction to Chemistry he encourages us to look at chemistry anew through a chemist's eyes in order to understand its central concepts and to see how it contributes not only towards our material comfort but also to human culture Atkins shows how chemistry provides the infrastructure of our world through the chemical industry the fuels of heating power generation and transport as well as the fabrics of our clothing and furnishings By considering the remarkable achievements that chemistry has made and examining its place between both physics and biology Atkins presents a fascinating clear and rigorous exploration of the world of chemistry its structure core concepts and exciting contributions to new cutting edge technologies ABOUT THE SERIES The Very Short Introductions series from

Philosophy of Biology: A Very Short Introduction Samir Okasha, 2019-11-28

Over the last forty years, the philosophy of biology has emerged as an important sub-discipline of the philosophy of science. Covering some of science's most divisive topics, such as philosophical issues in genetics, it also encompasses areas where modern biology has increasingly impinged on traditional philosophical questions, such as free will, essentialism, and nature vs. nurture. In this Very Short Introduction, Samir Okasha outlines the core issues with which contemporary philosophy of biology is engaged. Offering a whistle stop tour of the history of biology, he explores key ideas and paradigm shifts throughout the centuries, including areas such as the theory of evolution by natural selection, the concepts of function and design, biological individuality, and the debate over adaptationism. Throughout, Okasha makes clear the relevance of biology for understanding human beings, human society, and our place in the natural world, and the importance of engaging with these issues.

Four Laws That Drive the Universe Peter Atkins, 2007-09-06

The laws of thermodynamics drive everything that happens in the universe. From the sudden expansion of a cloud of gas to the cooling of hot metal, and from the unfurling of a leaf to the course of life itself, everything is directed and constrained by four simple laws. They establish fundamental concepts, such as temperature and heat, and reveal the arrow of time, and even the nature of energy itself. Peter Atkins' powerful and compelling introduction explains what the laws are and how they work, using accessible language and virtually no mathematics. Guiding the reader from the Zeroth Law to the Third Law, he introduces the fascinating concept of entropy and how it not only explains why your desk tends to get messier, but also how its unstoppable rise constitutes the engine of the universe.

Judgement and Sense in Modern French Philosophy Henry Somers-Hall,2022-06-23 This book proposes a radical new reading of the development of twentieth century French philosophy Henry Somers Hall argues that the central unifying aspect of works by philosophers including Sartre Foucault Merleau Ponty Deleuze and Derrida is their attempt to provide an account of cognition that does not reduce thinking to judgement Somers Hall shows that each of these philosophers is in dialogue with the others in a shared project however differently executed to overcome their inheritances from the Kantian and post Kantian traditions His analysis points up the continuing relevance of German idealism and Kant in particular to modern French philosophy with novel readings of many aspects of the philosophies under consideration that show their deep debts to Kantian thought The result is an important account of the emergence and essential coherence of the modern French philosophical tradition
