Usha Flora User Manual:

Nitrogen Use Efficiency in Plants Vanitha Jain, 2011-01-01 Nitrogen fertilizers are necessary to enhance agricultural production and to sustain food security. However, their inefficient use accrues from inherent limitations of the crop plants as well as the manner in which N fertilizers are formulated, applied and managed. The main aim of the book is to assess the various aspects of the fate of fertilizer N in context of the overall N inputs to agricultural systems with a view to enhance the efficiency of nitrogen use and reduce the negative impacts on environment. The cross-cutting issues relate to improvement in nitrogen use by emerging technologies, genetic enhancement, QTL mapping, meeting N needs by understanding its interactions with other nutrients and mitigation of nitrogen losses caused by environmental factors and management practices. *Nitrogen Use Efficiency in Plants* develops links between basic and applied research and practical crop production by addressing a wide range of topics relating to nitrogen use efficiency and to plant and crop responses to applications of nitrogen via fertilizers, including nitrogen acquisition and reduction, molecular approaches, nitrate induction and signaling, and nitrogen use under abiotic stresses. *Nitrogen Use Efficiency in Plants* is an invaluable classroom aid for academics working in plant physiology, biochemistry, biotechnology, molecular breeding and agronomy, and an essential professional resource for researchers working in plant and crop systems as it provides a comprehensive interdisciplinary description of problems related to the efficient use of nitrogen in agriculture. *Handbook of Spices in India: 75 Years of Research and Development*

P. N. Ravindran, K. Sivaraman, S. Devasahayam, K. Nirmal Babu, 2024-06-24 This compendium presents comprehensive information on more than 25 important spice crops commercially grown in India and traded globally, apart from over 40 spices that have the potential to be popularized. In 70 chapters, the book covers the achievements in research and development made in India for the past 75 years in various organizations, including research institutes, agricultural universities and private sector laboratories. Spices are natural products of plant origin used primarily for flavouring and seasoning or for adding pungency and flavour to foods and beverages. The flavour and fragrance of Indian spices had a magic spell on human culture since very ancient days. The importance of spices in Indian life and its contribution to the economy are substantial. India, as the world's leading producer of spices, is also a significant stakeholder in spices export trade globally. Indian spices, being sources of many high-value compounds, are also gaining much importance for other diversified uses, especially for their pharmaceutical and nutraceutical properties. A wide variety of 52 spices are grown in India, including black pepper, chillies, cardamom, ginger, turmeric, cinnamon, nutmeg, garlic, onion, cumin, coriander, saffron and vanilla. This book compiles a comprehensive holistic review on the subject, written by the best experts in the field in India, representing diverse agencies. This book is a single-point reference book for all those involved in the research, study, teaching and use of spices in India and abroad. ***Handbook of Plant and Crop Stress, Fourth Edition*** Mohammad Pessarakli, 2019-08-06 Since the publication of the third edition of the *Handbook of Plant and Crop Stress*, continuous discoveries in the fields of plant and

crop environmental stresses and their effects on plants and crops have resulted in the compilation of a large volume of the latest discoveries Following its predecessors this fourth edition offers a unique and comprehensive collection of topics in the fields of plant and crop stress This new edition contains more than 80% new material and the remaining 20% has been updated and revised substantially This volume presents 10 comprehensive sections that include information on soil salinity and sodicity problems tolerance mechanisms and stressful conditions plant crop responses plant crop responses under pollution and heavy metal plant crop responses under biotic stress genetic factors and plant crop genomics under stress conditions plant crop breeding under stress conditions empirical investigations improving tolerance and beneficial aspects of stressors Features Provides exhaustive coverage written by an international panel of experts in the field of agriculture particularly in plant crop stress areas Contains 40 new chapters and 10 extensively revised and expanded chapters Includes three new sections on plant breeding stress exerted to weeds by plants and beneficial aspects of stress on plants crops Numerous case studies With contributions from 100 scientists and experts from 20 countries this Handbook provides a comprehensive resource for research and for university courses covering soil salinity sodicity issues and plant crop physiological responses under environmental stress conditions ranging from cellular aspects to whole plants The content can be used to plan implement and evaluate strategies to mitigate plant crop stress problems This new edition includes numerous tables figures and illustrations to facilitate comprehension of the material as well as thousands of index words to further increase accessibility to the desired information

Gender and Agricultural Development Helen Kreider

Henderson, 2022-03-29 Agricultural planning and development are crucial to human survival but they usually proceed without any consideration of the importance of gender issues at the production level Although women have long been prime movers in agriculture their contribution to the world's food supply has been largely ignored and consequently their stake in development has been undermined This book is both a resource guide and a review of major issues in gender and agriculture which demonstrates that recognizing the contribution of women to agricultural production is a necessary step in development planning It presents relevant information and research literature regarding women's roles in agriculture in a consolidated and accessible format offering insights into how the inclusion or exclusion of appropriate information at the planning stage can have an impact during implementation It also provides guidelines for locating information on gender related agricultural issues and incorporating it into development planning research and training The literature reviewed not only calls attention to the work women do in order to improve their access to technology and training but also challenges existing development paradigms The issues discussed present women's experiences and local knowledge and allude to gender and class inequities that farming women face Each chapter is intended to help the reader address major gender issues in a specific subject in order to access relevant information and thereby better design and implement appropriate agricultural planning and policies By synthesizing twenty years of international research Gender and Agricultural

Development provides an effective tool for development practitioners to use in training programs or surveys in order to ensure the appropriate collection of gender disaggregated data and for educators to integrate gender issues into courses dealing with social aspects of agricultural systems. Its findings are presented in such a way as to allow them to be easily incorporated into innovative planning for more sustainable and equitable agricultural policies.
