M.,2023-12-31 This report provides an overview of the mini Stream Assessment Scoring System miniSASS and South African Scoring System Version 5 SASS5 as biomonitoring techniques for assessing the ecological condition of streams and rivers based on the identification of aquatic macroinvertebrates While miniSASS relies on minimally trained citizen scientists to identify macroinvertebrates at the Order level SASS5 utilizes expertly accredited practitioners for finer resolution even up to the family level However the reliance on citizen scientists for miniSASS identification introduces limitations in terms of precision accuracy and reliability To address these limitations ongoing developments within the CGIAR Initiative on Digital Innovation include the creation of a miniSASS smartphone application an upgraded website an interactive online course and a machine learning identification algorithm to assist with photo identification Additionally a revised dichotomous key has been developed to improve operator identification during miniSASS surveys Furthermore the potential for upscaling the machine learning identification algorithm to assist in identifying the 91
