Venture Telescope Manual:

Choosing and Using a Refracting Telescope Neil English, 2010-09-28 *Choosing and Using a Refracting Telescope* has been written for the many amateur astronomers who already own or are intending to purchase a refracting telescope perhaps to complement their existing arsenal of larger reflecting telescopes or for the specialist who requires a particular refractor for serious astronomical applications or nature studies Four hundred year ago during the winter of 1609 a relatively unknown Italian scientist Galileo Galilei designed a spyglass with two crude lenses and turned it skyward Since then refractors have retained their dominance over all types of reflector in studies of the Moon planets and double stars because of the precision of their optics and lack of a central obstruction in the optical path which causes diffraction effects in all commercially made reflectors Most mature amateur astronomers got started with a 60mm refractor or something similar Thirty years ago there was little choice available to the hobbyist but in the last decade long focus crown flint achromats have moved aside for some exquisitely crafted apochromatic designs offered by leading commercial manufacturers There has been a huge increase in the popularity of these telescopes in the last few years led by a significant increase in the number of companies particularly William Optics Orion USA StellarVue SkyWatcher and AstroTech who are now heavily marketing refractors in the amateur astronomical magazines In *Choosing and Using a Refracting Telescope* well known observer and astronomy writer Neil English celebrates the remarkable history and evolution of the refracting telescope and looks in detail at the instruments their development and their use A major feature of this book is the way it compares not only different classes of refractor but also telescopes of each class that are sold by various commercial manufacturers The author is perhaps uniquely placed to do this having used and tested literally hundreds of different refracting telescopes over three decades Because it includes many diverse subjects such as imaging with consumer level digital cameras imaging with webcams and imaging with astronomical CCD cameras that are not covered together in equal depth in any other single volume *Choosing and Using a Refracting Telescope* could become the refractor bible for amateur astronomers at all levels especially those who are interested in imaging astronomical objects of every class [The Hubble Space Telescope](#) David J. Shayler, David M. Harland, 2015-11-25 The highly successful Hubble Space Telescope was meant to change our view and understanding of the universe Within weeks of its launch in 1990 however the space community was shocked to find out that the primary mirror of the telescope was flawed It was only the skills of scientists and engineers on the ground and the daring talents of astronauts sent to service the telescope in December 1993 that saved the mission For over two decades NASA had developed the capabilities to service a payload in orbit This involved numerous studies and the creation of a ground based infrastructure to support the challenging missions Unique tools and EVA hardware supported the skills developed in crew training that then enabled astronauts to complete a demanding series of spacewalks Drawing upon first hand interviews with those closely involved in the project over thirty years ago this story explains the development of the servicing mission

concept and the hurdles that had to be overcome to not only launch the telescope but also to mount the first servicing mission a mission that restored the telescope to full working order three years after its launch saved the reputation of NASA and truly opened a new age in understanding of our place in space This is not just a tale of space age technology astronauts and astronomy It is also a story of an audacious scientific vision and the human ingenuity and determination to overcome all obstacles to make it possible Hubble Space Telescope From Concept to Success is a story of an international partnership dedicated teamwork and a perfect blend of human and robotic space operations that will inspire people of all ages The subsequent servicing missions that enabled the telescope to continue its scientific program beyond its 25th year in orbit are described in a companion volume Enhancing Hubble's Vision Servicing a National Treasure

insight into the creative processes of a contemporary composer Tinman presents 150 vignettes from author David Cope's life. Some of the notable individuals discussed in this innovative biography are John Cage, Karlheinz Stockhausen, Pierre Boulez, Aaron Copland, Warren Zevon, Carl Sagan, Frank Drake, Douglas Hofstadter, Arthur Knight, Danny Glover, Steven Spielberg, George Lucas, Dorothy Freeman, Arthur C. Clarke, Isaac Asimov, and Philip Jos Farmer. Tinman offers a fond music journey including two encounters with Bach, Rachmaninoff's classic Prelude in C sharp minor, Beethoven's Fifth Symphony, Pierre Boulez, and the sadness of Igor Stravinsky's death. The title borrowed from L. Frank Baum's book *The Wizard of Oz* is an aphorism affectionately attached to Cope in the late 1990s. The reference reflects the many attitudes about his work with his computer music program *Experiments in Musical Intelligence*; critics felt the results of this program lack heart. Though Tinman covers many other aspects of Cope's life from his love of the cello to his days as a graduate student at the University of Southern California and to his work as a composer, author, and teacher, the main theme centers on his search for self-identity.
