OA.1	Represent addition and subtraction with objects, fingers, mental images, drawings, numbers lines, or equations. Drawings need not show the mathematics in the problem. (This domain addresses situations where drawings are mentioned in the Standards.) 1. Objects (e.g., stars), adding and subtracting, visual representations, equations, or equations.	Use addition and subtraction within 20 to solve word problems involving situations of adding to, taking from, or joining together. Taking apart, and comparing, with unknowns in all positions, e.g., by using objects, drawings, and equations with a symbol for the unknown number to represent the problem. (See Glossary)	Use addition and subtraction within 100 to solve one- and two-step word problems involving situations of adding to, taking from, joining together, taking apart, and comparing, with unknowns in all positions, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem. (See Glossary)	Represent products of whole numbers, e.g., interpret 5×7 as the total number of objects in 5 groups of 7 objects each. For example, describe a context in which a total number of objects can be represented as 5×7 .	Interpret a multiplication equation as a comparison, e.g., interpret $35 = 5 \times 7$ as a statement that 35 is 5 times as many as 7 and 7 times as many as 5. Represent verbal statements of multiplicative comparisons as multiplication equations.	Use parentheses, brackets, or bars in numerical expressions, and evaluate expressions with these symbols.
OA.2	Solve addition and subtraction word problems, and add and subtract within 10, e.g., by using objects or drawings to represent the problem.	Solve word problems that call for addition of two whole numbers whose sum is less than or equal to 20, e.g., by using objects, drawings, and equations with a symbol for the unknown number to represent the problem.	Fluently add and subtract within 20 using mental strategies. (See Example 1, OA.2 for one of many strategies.) For one of Grade 2, solve from memory all sums of two one-digit numbers.	Represent whole-number products of whole numbers, e.g., interpret $30 = 3 \times 10$ as the number of objects in each whole where 30 objects are partitioned equally into 3 groups, or as a number of whole where 30 objects are partitioned into equal whole and clearly each. For example, describe a context in which a number of objects or a number of groups can be represented by $30 = 6 \times 5$.	Multiply or divide to solve word problems involving multiplicative comparison, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem, distinguishing multiplicative comparison from additive comparison. (See Glossary)	Write simple expressions that record calculations with numbers, and interpret numerical expressions without evaluating them. For example, describe the calculation "add 8 and 7, then multiply by 2" as $2 \times (8 + 7)$. Recognize that $3 \times (6 + 4)$ is three times as large as $6 + 4$, without having to calculate the indicated sum or product.
