

Work, Power, Energy Worksheet

Energy and work are interconnected—one can make the other.

Energy

Energy is stored work.
A battery can store energy to make things work whenever you want.

Energy can create forces,
which can cause motion,
which can do work.

Work

Work uses energy.
It takes energy to move things.
Energy can make things work.

Work can create energy.
A generator uses work to make energy,
which can be stored to do more work.

Work

Work is defined as a
force applied (moved)
through a distance.

$$\begin{array}{c} \text{Work (on forces)} \rightarrow W = Fd \\ \begin{array}{l} \nearrow \text{Force (in newtons)} \\ \searrow \text{Distance (in meters)} \end{array} \end{array}$$

Work equals force times distance.

If you push harder (more force)
you do more work.
If you push longer (more distance)
you do more work.

- 1) A go cart engine applies a force of 888N and moves the cart forward 22m.

- a) How much work is done? (2 points)

$$\begin{aligned} W &= f \cdot d \\ W &= 888 \text{ N}(22 \text{ m}) \\ &= 19,536 \text{ J or} \\ &= 19.54 \text{ kJ} \end{aligned}$$

- b) What is doing the work? (1 point)

go cart engine is doing the work

- c) If the driver wants to go further will the amount of work increase or decrease? Do you need a bigger/stronger engine to go further? (2 points)

The amount of work will increase and a stronger engine is needed to go further.

- d) We put on a bigger engine (1111N) and the cart still moves forward 22m. How much work is done now? (2 points)

$$\begin{aligned} W &= f \cdot d \\ &= 1111 \text{ N}(22 \text{ m}) \\ &= 24,442 \text{ J} \\ &= 24.24 \text{ kJ} \end{aligned}$$

Building State Capability Matt Andrews,Lant

Pritchett, Michael Woolcock, 2017-01-19 This is an open access title available under the terms of a CC BY NC ND 4.0 licence. It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations. Governments play a major role in the development process and constantly introduce reforms and policies to achieve developmental objectives. Many of these interventions have limited impact: however, schools get built but children don't learn; IT systems are introduced but not used; plans are written but not implemented. These achievement deficiencies reveal gaps in capabilities and weaknesses in the process of building state capability. This book addresses these weaknesses and gaps. It starts by providing evidence of the capability shortfalls that currently exist in many countries, showing that many governments lack basic capacities even after decades of reforms and capacity building efforts. The book then analyses this evidence, identifying capability traps that hold many governments back, particularly related to isomorphic mimicry, where governments copy best practice solutions from other countries that make them look more capable even if they are not more capable, and premature load bearing, where governments adopt new mechanisms that they cannot actually make work given weak extant capacities. The book then describes a process that governments can use to escape these capability traps. Called PDIA (problem driven iterative adaptation), this process empowers people working in governments to find and fit solutions to the problems they face. The discussion about this process is structured in a practical manner so that readers can actually apply tools and ideas to the capability challenges they face in their own contexts. These applications will help readers devise policies and reforms that have more impact than those of the past.
