EARTH'S ROTATION

Have you ever wondered why we have day and night? Is why our shadows look different at different times of the day? Is why the sun looks like it's moving across the sky throughout the day? It's because of Earth's rotation!

ROTATION

Earth spins around an invisible line called the axis. This spinning motion causes each location on Earth to move in a circle once every 24 hours. This means that different parts of the Earth face the Sun. The side facing the Sun is daytime, and the side facing away is nighttime. When the Earth spins and rotates, that's

DAY AND NIGHT

The Earth's axis is tilted at an angle. The side of the Earth that is facing the Sun is daytime, and the side that is facing away from the Sun is nighttime. As the Earth rotates, different parts of the Earth face the Sun. This causes day and night. The side of the Earth that is facing the Sun is daytime, and the side that is facing away from the Sun is nighttime. When the Earth spins and rotates, that's

SHADOWS AND THE SUN

Shadows are created when an object blocks light from the Sun. The Sun is a very bright star, and its light travels in straight lines. When the light hits an object, it creates a shadow. The shadow is the opposite side of the object from the Sun. The length of the shadow depends on the angle of the Sun in the sky. When the Sun is low in the sky, the shadow is long. When the Sun is high in the sky, the shadow is short.

OUR SOLAR SYSTEM

Our solar system is made up of the Sun and everything that orbits it. That includes eight planets, many moons, asteroids, comets, and other objects. The Sun is the largest object in the solar system. It is a yellow star that gives us light and heat. The planets are the large objects that orbit the Sun. They are made of different materials and have different shapes and sizes.

WHAT IS THE ASTEROID BELT?

The asteroid belt is a region of space between Mars and Jupiter that is filled with many small, rocky objects called asteroids. These objects are left over from the formation of the solar system. They are made of different materials and have different shapes and sizes. Some asteroids are very small, while others are large enough to be seen with a telescope.

Here is a diagram to describe the order of the planets.

SHADOWS

Can you show the shadow of the Earth?

Write in your own words why you think the shadow of the Earth is...
