Early Life Origins of Human Health and Disease J. P. Newnham, M. G. Ross, 2009-06-19 There is compelling evidence that many of the risks leading to the most frequent chronic diseases in adulthood originate in the earliest stages of life Adverse environmental conditions in utero and during infancy can lead to negative health effects during the subsequent lifetime of the exposed individual This book offers precious insights into the latest concepts and results from epidemiologic clinical and basic studies in this burgeoning area of health care The developmental origins of various diseases such as diabetes obesity and cancer are examined as well as the early programming of reproductive health and different organs Attention is given to the impact of environmental factors such as nutrition and pollution and the mediating genetic and epigenetic pathways are reviewed A crucial point under discussion is the concept of environmental insults adversely affecting not only the exposed persons but also their descendants In addition the economic consequences of a suboptimal start to life and the importance of preventive measures are stressed This publication is of great value to anyone interested in health care notably to specialists in obstetrics pediatrics internal medicine obesity diabetes and heart disease A Karger Publishing Highlights 1890 2015 title

Fetal Medicine Charles H. Rodeck, Martin J. Whittle, 2009-01-01 Fetal medicine has emerged as a separate subspecialty over the last 30 years as a result of major advances in a number of areas in particular ultrasound imaging cytogenetics molecular biology and biochemistry The widespread use of antenatal screening and diagnostic tests has led to an increased need for obstetricians to have knowledge and skills in fetal medicine This book provides the information that underpins training programmes in fetal medicine and integrates science and clinical disciplines in a practical and useful way Clinical sections include the latest advances in prenatal screening a systems based presentation of the diagnosis and management of fetal malformations complete coverage of common and rare fetal conditions including growth restriction endocrine and platelet disorders early pregnancy loss and twins multiple pregnancy More focus on important basic science concepts such as maternofetal cell trafficking and the relevance to clinical management Physiological Basis of Aging and Geriatrics Paola S. Timiras, 2007-08-16 Extensively revised and updated to reflect the current state of knowledge in the study of aging this Fourth Edition offers a complete profile of the aging process at all levels from molecules and cells to demography and evolution Written by international experts in current basic and clinical aging research this text includes aspects of individual comparative and differential aging and discussions of theories and mechanisms of aging This invaluable reference illustrates how bodily systems organs and functions are affected with aging describes how genetic and environmental factors influence age related changes and addresses some of the clinical consequences of these changes for health and longevity Well

illustrated with numerous tables and graphs this book presents up to date information from internationally renowned experts in various bio medical fields Inhalation Studies Robert F. Phalen,2008-10-22 This significantly updated and expanded new edition presents the scientific foundations of inhalation research essential to the design and conduct of toxicologic studies It incorporates the major advances that have been made in the field including recent advances in biology and the rapidly increasing global concerns and studies on particulate air **Cardio-Respiratory Control in Vertebrates** Mogens L. Glass,Stephen C. Wood,2009-07-24 Hopefully this book will be taken off of the shelf frequently to be studied carefully over many years More than 40 researchers were involved in this project which examines respiration circulation and metabolism from sh to the land vertebrates including human beings A breathable and stable atmosphere rst appeared about 500 million years ago Oxygen levels are not stable in aquatic environments and exclusively water breathing sh must still cope with the ever changing levels of O₂ and with large temperature changes This is reflected in their sophisticated count current systems with high O₂ extraction and internal and external O₂ receptors 2.2 The conquest for the terrestrial environment took place in the late Devonian period 355-359 million years ago and recent discoveries portray the gradual transitional evolution of land vertebrates The oxygen rich and relatively stable atmospheric conditionsimplifiedthat oxygen sensing mechanisms were relatively simple and gain compared with acid base regulation Recently physiology has expanded into related fields such as biochemistry molecular biology morphology and anatomy In the light of the work in these fields the introduction of DNA based cladograms which can be used to evaluate the likelihood of land vertebrates and lung sh as a sister group could explain why their cardio respiratory control systems are similar The diffusing capacity of a duck lung is 40 times higher than that of a toad or lung sh Certainly some animals have evolved to rich high performance levels

,2003-02 *The Oxford Handbook of Evolutionary Medicine* Martin Brüne,Wulf Schiefenhövel,2019-01-31 Medicine is grounded in the natural sciences where biology stands out with regard to our understanding of human physiology and the conditions that cause dysfunction Ironically though evolutionary biology is a relatively disregarded field One reason for this omission is that evolution is deemed a slow process Indeed the macroanatomical features of our species have changed very little in the last 300 000 years A more detailed look however reveals that novel ecological contingencies partly in relation to cultural evolution have brought about subtle changes pertaining to metabolism and immunology including adaptations to dietary innovations as well as adaptations to the exposure to novel pathogens Rapid pathogen evolution and evolution of cancer cells cause major problems for the immune system Moreover many adaptations to past ecologies have actually turned into risk factors for somatic disease and psychological disorder in our modern worlds i e mismatch among which epidemics of autoimmune diseases cardiovascular diseases diabetes and obesity as well as several forms of cancer stand out One could add depression anxiety and other psychiatric conditions to the list The Oxford Handbook of Evolutionary Medicine is a compilation of up to date insights into the evolutionary history of ourselves as a species exploring how and why our evolved design may convey vulnerability to disease Written in a classic textbook style emphasising physiology and pathophysiology of all major organ systems the Oxford Handbook of Evolutionary Medicine is valuable reading for students as well as scholars in the fields of medicine biology anthropology and psychology Comparative Biology of the Normal Lung Richard A.
