Suggestion Of Psc In Bd In 2014:

Bangladesh's Maritime Policy Abul Kalam, 2018-10-03 Following successive international legal verdicts Bangladesh is now an accredited maritime state Possessing a spacious territorial sea and an extended continental shelf with a maritime zone almost equalling its land borders a window of opportunity has opened for the country to realise its developmental aspirations Yet it faces numerous challenges many of which are entwined This book is a detailed analysis of Bangladesh's maritime strategy It charts the country's maritime legacies including disputes with both Myanmar and India and analyses the contributions of the leadership in the maritime territorial gains The author examines Bangladesh's need to consolidate these newly reclaimed gains whilst exploring the unremitting interest of major global power players in maintaining maritime resource exploitation navigation and security Finally the author demonstrates how the country needs to embrace the notional principles of sustainable development of its ocean economy to utilize its resources and how it has since been coming to grips with the emerging concept of blue economy to enhance its enduring national development The first systematic study on Bangladesh's maritime policy and the country's importance in the emerging geopolitical rivalry in the Indian Ocean this book will be of interest to academics in the field of South Asian and Indian Ocean politics *A New Energy Frontier* Sudhir T Devare, 2008 The region comprising the countries around and in the proximity of the Bay of Bengal has remained relatively unexplored for energy Following a few major discoveries of oil and natural gas it is now becoming promising even as the energy requirements of a combined population exceeding 1.5 billion are growing exponentially **Positive Psychological Approaches to Disaster** Stefan E. Schulenberg, 2020-02-21 Written by prominent proponents of disaster mental health and or positive psychology this comprehensive book examines disaster mental health and positive psychology in the context of natural and technological disasters Chapters in the first section focus on applications of meaning and resilience in the area of disaster mental health both serving as primary examples of applications of positive psychology and related frameworks Later chapters focus more specifically on key aspects of disaster mental health including the importance of preparedness training and special populations Contributors consistently align their insights with positive psychological approaches either by explicitly referencing their relevance or alluding less directly to themes in positive psychology Among the topics discussed The role of religion and spirituality in finding meaning after disasters Veterans and disaster response work Firefighters an occupational case study of resilience Strategies for responding to adolescents following natural and technological disasters Effective crisis response for facilitating posttraumatic growth *Positive Psychological Approaches to Disaster Meaning Resilience and Posttraumatic Growth* is a significant and timely collection of research representing an effort of internationally respected scholars in positive psychology and disaster mental health *From Single Stem Cells to Organoids, Organ Repair, and Public Health* Lon J. Gaşior,George E. Billman,2019-11-27 *Recent advances in Pancreatology* Atsushi Masamune,2014-11-19 Pancreatic diseases include intractable ones including acute and chronic pancreatitis and pancreatic cancer In recent years great advances have been made in the field of pancreatology including the pathogenesis diagnostic modalities and development of novel therapeutic interventions It has been established that pancreatic stellate cells play a pivotal role in the development of pancreatic fibrosis in chronic pancreatitis as well as in pancreatic cancer known as desmoplastic reaction Although it might be still controversial accumulating evidence has shown that interaction between pancreatic stellate cells cancer cells contribute to the progression of pancreatic cancer through the increased proliferation and migration and production of cytokines and extracellular matrix components In addition pancreatic stellate cells lead to the resistance to chemotherapy and radiation therapy Pancreatic stellate cells attract the researchers as a novel therapeutic target of pancreatic cancer Genetic studies have shown that mutations in the trypsin related genes such as cationic trypsinogen PRSS1 gene and the serine protease inhibitor Kazal type 1 SPINK1 gene are associated with pancreatitis In general each of these factors appears to limit trypsin activation or enhance inactivation and is believed to increase intrapancreatic trypsin activity and predispose to pancreatitis when the gene is mutated These results have supported a concept that pancreatic protease anti protease plays pivotal roles in the pathogenesis of pancreatitis In addition genetic studies focusing on phenotypic variances would provide us with important information how genetic variants would affect the phenotypic variances Autophagy is an intracellular bulk degradation system in which cytoplasmic components are directed to the lysosome vacuole by a membrane mediated process Recent studies have highlighted a role of autophagy in acute pancreatitis Using a conditional knockout mouse that lacks the autophagy related Atg gene Atg5 in the pancreatic acinar cells autophagy exerts a detrimental effect in pancreatic acinar cells by activation of trypsinogen to trypsin A theory in which autophagy accelerates trypsinogen activation by lysosomal hydrolases under acidic conditions thus triggering acute pancreatitis in its early stage The epithelial mesenchymal transition is a developmental process that allows a polarized epithelial cell to undergo multiple biochemical changes that enable it to assume a mesenchymal phenotype The phenotype associated with epithelial mesenchymal transition includes enhanced migratory capacity invasiveness elevated resistance to apoptosis and greatly increased production of extracellular matrix components In addition to its role in development tissue regeneration and fibrosis epithelial mesenchymal transition is now considered as a critical process in cancer progression Induction of epithelial mesenchymal transition in cancer cells results in the acquisition of invasive and metastatic properties Epithelial mesenchymal transition could be an important mechanism in the progression of pancreatic cancer and its poor prognosis Autoimmune pancreatitis is a unique form of pancreatitis in which autoimmune mechanisms are suspected to be involved in the pathogenesis There is accumulating study to deal with this new disease concept In addition to these topics we have selected several topics in pancreatology focusing on recent studies increasingly deepening our knowledge in both basic and clinical researches Program Implementation Plan (PIP):
