Types Of Blood Stain Patterns:

Bloodstain Pattern Analysis in Forensic Investigations Mr. Rohit Manglik, 2024-07-24 Explains bloodstain pattern types formation and interpretation techniques used in crime scene analysis A vital resource for forensic science and criminology students

Handbook of Bloodstain Pattern Analysis Toby L. Wolson, 2024-12-13 The Handbook of Bloodstain Pattern Analysis captures the latest understanding of the science that supports bloodstain pattern analysis BPA and includes the results of numerous research studies using modern technologies not found in previously published books It provides the BPA community with a modern up to date reference and training manual to outline and validate the utility repeatability and reliability of BPA science BPA has recently been presented in the news media as an example of junk science used in a handful of cases involving wrongful convictions However the reality is that the primary issue for BPA in these wrongful convictions is not the science it is the result of substandard training and the lack of experience of BPA analysts prior to beginning casework and testifying in court as experts As such this book is written to serve as an essential study guide for analysts preparing to sit for the International Association for Identification IAI Bloodstain Pattern Analyst Certification exam The contents of the book are guided by the ANSI ASB Standards for a Bloodstain Pattern Analysis Training Program Each chapter has been written by top experts conversant on the relevant BPA BPA terminology forensic science physics fluid dynamics crime scene analysis education training bias and current relevant legal considerations for use of BPA in court Handbook of Bloodstain Pattern Analysis is the most up to date resource on BPA currently available providing a definitive training manual for practitioners and an essential reference for forensic pathologists police investigators crime scene investigators attorneys and students enrolled in forensic science university courses

Blood Dynamics Anita Y. Wonder, 2001 Today s resources on bloodstain analysis are still based on methods that were derived in the 1920s Although medical and clinical research have provided a growing body of information on blood composition and behavior this information has been ignored in favor of historical bloodstain analysis methods until now With 25 years of experience in the field author Anita Wonder shows how to use these new methods for interpreting bloodstains including non Newtonian fluid behavior a process that does not conform to Sir Isaac Newton s laws of motion and three dimensional dispersion modeling Blood Dynamics focuses on how to accurately identify eight bloodstain pattern types and their permutations It covers every aspect of bloodstain analysis and shows how some standard practices of reconstruction are not only unnecessary for identification of blood dynamics but can even be misleading This book presents completely new scientific evaluations of blood dynamics and will fundamentally change the way in which bloodstains are interpreted As such it will be required reading for anyone who deals with blood evidence at the crime scene in the lab or in the courtroom

Bloodstain Pattern Analysis with an Introduction to Crime Scene Reconstruction Tom Bevel, Ross M. Gardner, 2008-04-08 Objective establishment of the truth is the goal of any good crime scene investigator This demands a consideration of all evidence available using proven

scientific methodologies to establish objective snapshots of the crime. The majority of forensic disciplines shed light on the who of a crime. Bloodstain pattern analysis is one of the most important.

Crime Scene Bloodstain Pattern Analysis Workbook
N. Leroy Parker, 2014-01-22
This workbook is designed to assist the Crime Scene Analyst Technician or Investigator in documenting bloodstained patterns that are located at the crime scene or on bloodstained items that are submitted for an analysis. It is also designed to assist the Crime Scene Analyst Technician or Investigator in reconstructing or analyzing a bloodstained crime scene or a bloodstained item for which a bloodstain pattern analysis is requested. The documentation could be accomplished with overall midrange photographs and close up photographs with 2 3 or 6 centimeter stick on tapes that should be placed in the center of each rectangular area. The documentation should also consist of notes and rough sketches with measurements. The close up photographs of the rectangular areas with the 2 3 or 6 inches stick on tapes that were placed in the center of those areas should be taken with a parallel film camera plane. The stick on tapes should be labeled according to the surface on which they would be placed. Example: West wall of living room 1 ww of lr 1 and west wall of living room 2 ww of lr 2 etc. The number of close up photographs would be determined by the number of rectangular areas with the stick on tapes. Example: At least ten 10 close up photographs should be taken if ten 10 stick on tapes were placed on the bloodstained surface. The bloodstain pattern reconstruction or analysis should be done by first recognizing and/or identifying the many different types of patterns in a bloodstained scene or on a bloody item. The next step should involve the reconstruction of the points or areas of convergence and origin and then a determination of how the other patterns were most likely created. The workbook contains several tasks and assignments that would provide the student with the tools to accomplish the documentation and analysis. The Crime Scene Analyst Technician or Investigator after successfully completing the workbook workshop should be aware that:

- 1 0 Single drops of blood in a crime scene or on an item were influenced by the surface from which the blood fell, the volume, the diameter, the shape, the impact angle, the scalloping of the perimeter and the direction of travel of the dropped blood that impacted the target surface, the volume, the height from which the blood fell, the texture of the target surface on which the blood fell, the angle of the targeted bloodstained surface and the horizontal speed of the source that issued the blood.
- 2 0 Numerous drops of blood in the same pattern in a crime scene or on an item were influenced by the force or the impact less than 25 feet per second (dropped blood) and cast off bloodstain 25 to 100 feet per second (medium velocity bloodstain) over 100 feet per second (high velocity bloodstain).
- 3 0 The reconstruction or analysis of the points or areas of origin could be determined by strings, scaled drawings or calculations. The interpretation of the other patterns (non impact) along with the Medical Examiner's autopsy report should allow the crime scene analyst technician or Investigator to complete a bloodstain pattern analysis report and if possible explain and/or testify to the

Rivers, 2006 **The Development of an Element-based Method for the Reliable Identification of Bloodstain Patterns** Ravishka Marishi Arthur, 2013 The classification of bloodstain patterns forms an important part of Bloodstain Pattern Analysis BPA Classification requires an analyst to use characteristic features of a bloodstain pattern to place it into definable categories according to the mechanism which has led to its deposition Like many other forensic disciplines however BPA has recently come under the microscope due to issues regarding the methodology that is employed by an analyst when interpreting a bloodstain pattern High variability in the appearance of bloodstain patterns coupled with the ambiguity in pattern interpretation has demonstrated that the root of these problems stem from fundamental flaws in the current methodology A consequence of this has been the failure on the part of an analyst to articulate the thought process involved in interpreting the bloodstain pattern Thus creating challenges for the jury to understand the basis for any conclusions that have been made Therefore this study was conducted with the aim of developing a novel element based approach to the classification of a bloodstain pattern This methodology will provide a more objective approach by focusing on observable characteristics of individual bloodstains in the pattern and characterising associations

between these bloodstains prior to determining the mechanism of formation The strategy involves going back to the basics of pattern formation and visualising the genesis through the use of high speed video photography The results of this study have shown strong support for the implementation of an element based approach to the classification of bloodstain patterns Unlike current methods this novel approach utilises simple descriptive terminology when describing characteristics of a bloodstain This terminology features as part of an Atlas of Elements which was created as a visual aid for an analyst during the classification process Finally results suggest there are potential associations that occur between groups of defined bloodstains that could provide support for the presence or absence of a particular pattern type This study presents the long awaited solution for the issues that plague the field of Bloodstain Pattern Analysis *Sourcebook in Forensic Serology, Immunology, and Biochemistry* Robert E.
