Study Guide:

1. Chemical Bonds

- Definition: The force that holds two atoms together.
- Types: ionic bonds, covalent bonds, and metallic bonds.

The formation of ions is a fundamental concept in chemistry, playing a crucial role in the creation of ionic compounds. Atoms achieve stability by attaining a full outer shell of electrons, resembling the electron configuration of noble gases. This process involves gaining or losing electrons, leading to the formation of ions. Metals, with their tendency to lose electrons, become positively charged ions called cations. Conversely, nonmetals gain electrons to become negatively charged ions known as anions.

2. Ion Formation

- Ions: An atom or molecule with a net electric charge due to the loss or gain of one or more electrons.
- Cations: A positively charged ion (loss of electrons).
- Anions: A negatively charged ion (gain of electrons).

Sodium (Na), a metal, readily loses its single valence electron to achieve the stable electron configuration of neon (Ne), resulting in a sodium cation (Na⁺). This cation now possesses 11 protons and 10 electrons, leading to a net positive charge. The formation of an ion is driven by the desire to achieve a stable electronic configuration, mimicking the noble gases, which are known for their chemical inertness.

3. Ionic Compounds

Ionic bonds, formed between oppositely charged ions, are the foundation of ionic compounds. These bonds arise from the electrostatic attraction between cations and anions. The transfer of electrons from a metal atom to a non-metal atom results in the formation of these oppositely charged ions, which are then held together by the creation of an ionic bond. The resulting ionic compounds exhibit characteristic properties, including high melting points and solubility in water.

4. Metallic Bonds

- Formation: Occurs between metals (which lose electrons) and non-metals (which gain electrons).
- Characteristics: Strong, non-directional bonds that allow for the delocalization of electrons, leading to stable structures.
