

The Entrance Exam for Prospective Paramedic Students is an EMS-specific exam that was designed to evaluate nationally registered EMTs who are applying or matriculating to paramedic school. The exam has over 130 questions, which range in difficulty level from knowledge recall to problem solving. The exam consists of six topic areas, which were selected by a national committee of Emergency Medical Service educators for the purpose of determining which students are most likely to succeed in a paramedic education program.

After completing this study guide, if you wish to seek additional EMT, anatomy and physiology practice questions, [please visit www.fisdap.net](http://www.fisdap.net) and purchase EMT Study Tools.

Study Guide to DSM-IV-TR Michael A. Fauman, 2002 Study Guide to DSM IV TR demonstrates the fundamental features of DSM IV TR disorders through brief clinical vignettes and questions and answers. These vignettes help beginning students and experienced clinicians visualize a disorder in the context of a multidimensional patient who is characterized by more than just the fulfillment of individual diagnostic criteria. Study Guide to DSM IV TR Describes common problems in diagnosis. Provides guidelines for resolving issues of diagnostic uncertainty. Summarizes the core concepts of the diagnostic group discussed in each chapter. Presents interesting case examples that provide diagnostic prototypes of the individual disorders included in DSM IV TR. Includes self assessment questions that allow the reader to test their understanding of DSM IV TR. Several new sections have been added: Boundary Between Normality and Abnormality, Dimensional vs Categorical Classification. Study Guide to DSM IV TR is an indispensable companion designed to help students, residents, and clinicians conceptualize how DSM IV TR can be used in everyday practice

The American Psychiatric Association Practice Guidelines for the Psychiatric Evaluation of Adults, Third Edition American Psychiatric Association, 2015-07-29 Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), the American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process, APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by

weighing potential benefits and harms of an intervention in a specific clinical context Clear concise and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice with the goal of improving quality of care The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions Each module has a consistent organization which will assist users in finding clinically useful and relevant information quickly and easily This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process These guidelines address the following nine topics in the context of an initial psychiatric evaluation review of psychiatric symptoms trauma history and treatment history substance use assessment assessment of suicide risk assessment for risk of aggressive behaviors assessment of cultural factors assessment of medical health quantitative assessment involvement of the patient in treatment decision making and documentation of the psychiatric evaluation Each guideline recommends or suggests topics to include during an initial psychiatric evaluation Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions In addition to reviewing the available evidence on psychiatry evaluation each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care
