Technical User Manual Translation:

Translating Technical Documentation Without Losing Quality Marc Achteleg, 2012 Translating technical documentation such as user manuals online help and other types of user assistance is essentially different from translating other forms of documents. If you translate technical documentation in the same way as you translate other texts, chances are that your clients, mostly technical writers, will be quite unhappy with the results. For example, complex language that makes a novel or sales brochure interesting can be exactly what makes a user manual incomprehensible. When translating technical documentation, you should understand how your clients have designed their documents for clearness and simplicity. Only then can your translation reflect the same principles. This book provides you with a compilation of the basic technical writing rules that every technical writer follows. When you adhere to the same rules as you translate, it's almost guaranteed that both writers and readers will be happy with the quality of your work. Audience: Professional translators. *Technical Translation* Jody Byrne, 2006-06-23 Based largely on my doctoral dissertation *Textual Cognetics and the Role of Iconic Linkage in Software User Guides*, this book is intended to serve as an introduction to technical translation and usability for translators and translation researchers. In this book, we will look at how it is possible to improve the quality of technical translations by drawing on cognitive psychology, usability engineering, and technical communication to develop skills which can be implemented during the text production stage of the translation process to ensure more usable texts. This book draws on a broad range of research and makes it accessible and applicable to an audience with a background primarily in translation, although those with backgrounds in technical writing will also find the discussions of usability, cognitive psychology, and usability testing useful. Technical translation has traditionally been regarded as the poor cousin of real translation. Often regarded as a vocational, practical, and at times rather basic type of translation, it has been largely neglected in the literature on translation theory. The work that has been done in this area has largely been restricted to terminological issues or technical issues, e.g. tools such as translation memories and machine translation, etc. or does not fully reflect the reality of modern translation and needs to be updated, e.g. Pinchuk 1977, Sykes 1971. However, technical translation is a much more promising avenue of theoretical investigation than many suspect. **Translating Texts** Brian Baer, Christopher Mellinger, 2019-11-22 Clear and accessible, this textbook provides a step-by-step guide to textual analysis for beginning translators and translation students. Covering a variety of text types including business letters, recipes, and museum guides in six languages (Chinese, English, French, German, Russian, and Spanish), this book presents authentic research-based materials to support translation in any of these languages. *Translating Texts* will provide beginning translators with greater text awareness, a critical skill for professional translators. Including discussions of the key theoretical texts underlying this text-centred approach to translation and sample rubrics for self-assessment, this coursebook also provides easy instructions for creating additional corpora for other text types and in other languages. Ideal for both language-neutral and language-specific

classroom settings this is an essential text for undergraduate and graduate level programs in modern languages and translation Additional resources are available on the Routledge Translation Studies Portal <http://routledgetranslationstudiesportal.com>
