

Turbocharger Calculations

Turbocharger Compressor Calculations

Overview

The purpose of this document is to provide a comprehensive overview of the calculations involved in determining the performance of a turbocharger compressor. This document is intended for use by engineers and designers involved in the design and development of turbocharged engines.

Engine Performance Data Collection

The first step in the design process is to collect the engine performance data. This data is typically obtained from the engine manufacturer or from test results. The data should include the engine speed, torque, and power at various operating conditions. The data should also include the engine inlet air temperature and pressure, and the engine exhaust gas temperature and pressure.

Once the engine performance data has been collected, the next step is to determine the required compressor performance.

Determine Compressor Performance

The compressor performance is determined by the engine performance data and the desired engine operating conditions. The compressor performance is typically expressed in terms of the compressor pressure ratio and the compressor efficiency.
