

Tellabs® 5320L/S Digital Cross-Connect — GR-303 Voice Circuit Concentration

Retain more private line T1 service revenue by reducing the cost of service delivery.

Overview

Private Line T1 is the primary method of supplying business and enterprise customers with access to Switched Voice and Data networks and remains a critical revenue component for service centers. The Tellabs® 5320L/S Digital Cross-Connect provides a key function in private line service delivery by enabling carriers to groom and fill circuits prior to switching and transport, for more efficient, lower-cost network utilization.

The highly competitive T1 services market requires that successful carriers identify opportunities to maximize revenue and minimize the costs associated with these services. The Tellabs 5320L/S Digital Cross-Connect with GR-303 Voice Circuit Concentration enables carriers to maximize existing assets, such as voice switches and NDCs, to further reduce private line T1 service costs.

Features and Benefits

The Tellabs 5320L/S Digital Cross-Connect Groom/Fill Application

In today's network (Figure 1), a customer premise channel bank or Integrated Access Device (IAD) multiplexes individual voice or data (e.g., frame relay) circuits into a T1 line for transport to the nearest carrier switching center or Central Office (CO). At the switching center, the Tellabs 5320L/S Digital Cross-Connect performs a number of functions, including groom and fill:

- Terminates multiple inbound T1s, whose constituent DS-0s are a mix of discrete voice and data channels, then
- Reassembles them as multiple outbound T1s whose DS-0s contain either all voice channels or all data channels.

Figure 1: Tellabs 5320L/S Digital Cross-Connect Groom and Fill Function
