Technical Analysis Gap Down:

Technical Analysis of Gaps Julie R. Dahlquist, Richard J. Bauer, 2012-06-05 Gaps have attracted the attention of market technicians from the earliest days of charting. They are not merely conspicuous; they represent price jumps that could signal profitable trading opportunities. Until now, however, folklore about gap trading has been common, and tested research-based knowledge virtually nonexistent. In *Technical Analysis of Gaps*, renowned technical analysis researchers Julie Dahlquist and Richard Bauer change all that. Drawing on 60 years of comprehensive data, they demonstrate how to sort strategic gaps from trivial ones and successfully trade on gaps identified as significant. Building on work that recently earned them the Market Technicians Association's 2011 Charles H. Dow Award for creativity and innovation in technical analysis, Dahlquist and Bauer offer specific gap-related trading tips for stocks, futures, and options. They consider a wide variety of market conditions, including gap size, volume, and previous price movement, illuminating their findings with easy-to-understand diagrams. Coverage includes understanding what gaps are and how they arise, recognizing windows on candlestick charts, identifying gaps with superior profit potential, combining gaps with other technical techniques for a more complete and effective analysis, and putting it all together with real trading strategies. For stock, commodity, and currency traders in the U.S. and worldwide, and for active individual investors seeking new ways to maximize returns.

Charting and Technical Analysis Fred McAllen, 2012-04-06 To invest successfully or trade in Stocks, Options, Forex, or even Mutual Funds, it is imperative to know AND understand price and market movements that can only be learned from Technical Analysis. You should NEVER attempt Trading or Investing without it. My 25 years experience has taught me that every book on the market regarding Charting and Technical Analysis is seemingly worthless. All seem to find yet another creative way to tell you to Buy Low and Sell High. And they offer NO in-depth understanding or analysis about WHO is buying and WHO is selling and when. Point is, anyone experienced or not can show you a picture of a Chart and tell you to buy at the bottom and sell at the top. That is simple hindsight and is always 20/20. This book is different. It is IN DEPTH EXPLAINED and you WILL learn price movements and technical analysis from this information. You will understand and recognize tops and bottoms in the market and in particular stocks AS they are forming. This is highly valuable information and you should NEVER attempt to trade or invest without this knowledge. Mutual Funds: Most people think they do not need this information because they have a Mutual Fund. That could not be farther from the truth. Investing your hard-earned money should be done with your own knowledge of market direction, when to buy and when to move your money to safety. Without this knowledge, you are at the mercy of a salesperson hungry to earn a commission. Thus, invariably entering the market at the wrong time and in the wrong investment. No one else has your best interest in mind. So learn to protect your money or keep it in the bank. It's that simple. The next move is yours.

Cybernetic Trading Strategies Murray A. Ruggiero, 1997-07-01 The computer can do more than show us pretty pictures. It can optimize, backtest, prove, or disprove old theories, eliminate the bad ones, and make the good ones better. Cybernetic

Trading Strategies explores new ways to use the computer and finds ways to make a valuable machine even more valuable from the Foreword by John J. Murphy. Until recently the computer has been used almost exclusively as a charting and data gathering tool. But as traders and analysts have quickly discovered its capabilities are far more vast. Now in this groundbreaking new book, Murray Ruggiero, a leading authority on cybernetic trading systems, unlocks their incredible potential and provides an in-depth look at the growing impact of advanced technologies on intermarket analysis. A unique resource, *Cybernetic Trading Strategies* provides specific instructions and applications on how to develop tradable market timing systems using neural networks, fuzzy logic, genetic algorithms, chaos theory, and machine induction methods. Currently utilized by some of the most powerful financial institutions in the world, including John Deere and Fidelity Investments, today's advanced technologies go beyond subjective interpretations of market indicators to enhance traditional analysis. As a result, existing trading systems gain a competitive edge. Ruggiero reveals how incorporating elements of statistical analysis, spectral analysis, neural networks, genetic algorithms, fuzzy logic, and other high-tech concepts into a traditional technical trading system can greatly improve the performance of standard trading systems. For example, spectral analysis can be used to detect when a market is trending earlier than classical indicators such as ADX. Drawing on his extensive research on market analysis, Ruggiero provides an incisive overview of cyber systems that when applied correctly can increase trading returns by as much as 200% to 300%. The author covers a wide range of important topics, examining classical technical analysis methodologies and seasonal trading, as well as statistically based market prediction and the mechanization of subjective methods such as candlestick charts and the Elliott Wave. Precise explanations and dozens of real-world examples show you how to incorporate advanced technologies into classical technical analysis methodologies. Identify which of these technologies have the most market applicability. Build trading systems to maximize reliability and profitability based on your own risk-reward criteria. Most importantly, *Cybernetic Trading Strategies* takes you step by step through system testing and evaluation, a crucial step for controlling risk and managing money. With up-to-date information from one of the field's leading authorities, *Cybernetic Trading Strategies* is the definitive guide to developing, implementing, and testing today's cutting-edge computer trading technologies.
