Understanding Education And Educational Research:

Understanding Education and Educational Research Paul Smeyers, Richard Smith, 2014-11-10 Educational research is widely believed to be essentially empirical consisting mainly of collecting and analysing data with randomised control trials as the gold standard This book argues that good educational research is often philosophical in nature Offering a critical overview of the current state of educational research the authors argue that there are two factors in particular that distort it One is that throughout the world it is expected to serve the interests of the state in securing educational improvements as measured by standardised examination results and to demonstrate scientific credentials sufficient to guarantee absence of ideological bias and carry conviction The other is that learning to do educational research is generally seen as a matter of being trained in empirical research methods The authors demonstrate by contrast that good educational research needs the rigorous thinking characteristic of philosophy and that philosophical treatments themselves sometimes constitute such research

Works' Doesn't Work Paul Smeyers, Marc Depaepe, 2007-01-07 Education and educational research according to the current fashion are supposed to be concerned with what works to the exclusion of all other considerations All over the world and particularly in the English speaking countries governments look for means of improving student achievement as measured by standardized test scores Although such improvements are often to be welcomed they do not answer all significant questions about what constitutes good education Also the research on which they are based is not the only legitimate way to do educational research Social research and therefore educational research cannot ignore the distinctive nature of what it studies a social activity where questions of meaning and value cannot be eliminated and where interpretation and judgment play a crucial role In this book distinguished philosophers and historians of education from 6 countries focus on the problematical nature of the search for what works in educational contexts in practice as well as in theory Beginning with specific problems they move on to more general and theoretical considerations seeking to go beyond over simple ideas about cause and effect and the rhetoric of performativity that currently has educational thinking in its grip Freedom of inquiry in educational research can no longer be taken for granted Narrow definitions of what constitutes scientific research funding criteria that enforce particular research methods and policy decision processes that ignore any research that is not narrowly utilitarian create a context in many countries that discourages scholarship of a more speculative exploratory or critical sort This book brings together an exceptional combination of international and cross disciplinary scholars who bring the perspectives of history and philosophy of science to ask How did we arrive at this place and Where is educational research heading The book illuminates the anti intellectual consequences of a what works mentality in education and shows that the ostensibly scientific revolution in educational research in fact reflects an ahistorical and conceptually muddled understanding of what actually constitutes science This book could not be more timely and important Nicholas C Burbules Grayce Wicall Gauthier Professor University of Illinois With research increasingly tied to State policies
