

Understanding Populations: How Populations Change in Size

Write a definition of population in your own words.

B *I* U :: ::        -  -                

How Populations Change in Size

Over time, the growth rates of populations change because birth rates and death rates increase or decrease. Growth rates can be positive, negative, or zero. For a population's growth rate to be zero, the average number of births must equal the average number of deaths. A population would remain the same size if each pair of adults produced exactly two offspring, and each of those off-spring survived to reproduce. If the adults in a population are not replaced by new births, the growth rate will be negative and the population will shrink.

After Reading the above selection answer the questions below.

The average number of deaths is greater than the average number of births

Positive Growth Rate

The average number of deaths equals the average number of births

Negative Population Growth

The average number of births is greater than the average number of deaths

Zero Growth Rate

Suppose that every year, one half of the population has two offspring per person, and the other half has none. If all members of the population die after a year, what is the resulting growth rate? Explain your answer.
