

Volume of Irregular Shapes

Example 1:

Begin by breaking the figure into smaller figures.

This figure can be broken into two parts.

Both of the figures are rectangular prisms.

Then find the volume of each shape.

Rectangular prism volume = $l \cdot w \cdot h$

Prism A

$$l \cdot w \cdot h$$

$$5 \cdot 2 \cdot 5$$

$$V = 50 \text{ cm}^3$$

Prism B

$$l \cdot w \cdot h$$

$$5 \cdot 1 \cdot 5$$

$$V = 25 \text{ cm}^3$$

Add the volumes back together to find the volume of the entire figure.

$$V = 50 \text{ cm}^3 + 25 \text{ cm}^3$$

$$V = 75 \text{ cm}^3$$

Chapter 24 interview questions and answers on Introduction to waves and properties of wave motion **Test Functions for Three-dimensional Control-volume Mixed Finite-element Methods on Irregular Grids** Richard L. Naff,2000

Numerical methods based on unstructured grids with irregular cells usually require discrete shape functions to approximate the distribution of quantities across cells For control volume mixed finite element methods vector shape functions are used to approximate the distribution of velocities across cells and vector test functions are used to minimize the error associated with the numerical approximation scheme For a logically cubic mesh the lowest order shape functions are chosen in a natural way to conserve intercell fluxes that vary linearly in logical space Vector test functions while somewhat restricted by the mapping into the logical reference cube admit a wider class of possibilities Ideally an error minimization procedure to select the test function from an acceptable class of candidates would be the best procedure Lacking such a procedure we first investigate the effect of possible test functions on the pressure distribution over the control volume specifically we look for test functions that allow for the elimination of intermediate pressures on cell faces From these results we select three forms for the test function for use in a control volume mixed method code and subject them to an error analysis for different forms of grid irregularity errors are reported in terms of the discrete L2 norm of the velocity error Of these three forms one appears to produce optimal results for most forms of grid irregularity Tests of a Habitat Suitability Model for

Harms,1999-07-22 The Spiral of Inquiry follows the natural pattern of questioning in humans into the vortex of inquiry that spirals inward to the primordial Truth that makes all inquiry possible Arnold C Harms finds the ability to question to be the most crucial to humanity so that humans can be properly identified as homo interrogans or Inquiring Man This leads him to an examination of the process of questioning beginning with a phenomenological inquiry into the language related to questioning To illustrate the process of inquiry Harms analyzes five representative types of formal inquiry rational scientific historical psycho social and religious Through these styles he demonstrates that all formal inquiries when probed deeply enough are drawn into the great spiral of inquiry which leads inescapably to the primal Answer about the primordial Truth which makes all inquiry possible The author identifies this central truth as the Cosmos with its universal order without which there would be no inquiry at all With this study Harms clarifies much of the language surrounding the process of inquiry in humans **The Transit** ,1900 *Experimental science.
