Wolffe, 2006 This book expands upon the knowledge base and provides a compendium of intervention strategies to support and enhance the acquisition of social skills and children and youths with visual impairments Part 1 addresses social skills from a first person perspective The second part examines how theory seeks to explain social development and influences assessment and practice Part 3 ties personal perspectives and theory to actual practice Finally Part 4 offers numerous examples and models for teaching social skills to students who are blind or visually impaired including those with additional disabling conditions Introduction **Clinical Assessment of Child and Adolescent Personality and Behavior** Paul J. Frick, Christopher T. Barry, Randy W. Kamphaus, 2009-12-12 Psychologists offer an increasing variety of services to the public Among these services psychological assessment of personality and behavior continues to be a central activity One main reason is that other mental health professionals often do not possess a high level of competence in this area And when dealing with children and adolescents psychological assessment seems to take on an even greater role Therefore it follows that comprehensive graduate level instruction in assessment should be a high priority for educators of psychologists who will work with these youth This textbook is organized

into three sections consistent with the authors approach to teaching Part I provides students with the psychological knowledge base necessary for modern assessment practice including historical perspectives measurement science child psychopathology ethical legal and cultural issues and the basics of beginning the assessment process Part II gives students a broad review of the specific assessment methods used by psychologists accompanied by specific advice regarding the usage and strengths and weaknesses of each method In Part III we help students perform some of the most sophisticated of assessment practices integrating and communicating assessment results and infusing assessment practice with knowledge of child development and psychopathology to assess some of the most common types of behavioral and emotional disorders in youth A text focusing on assessment practices must be updated every four to six years to keep pace with advances in test development For example several of the major tests reviewed in the text such as the Behavioral Assessment System for Children and the Child Behavior Checklist have undergone major revisions since the publication of the last edition making the current content outdated Further another major test the Conners Rating Scales is undergoing substantial revisions that should be completed before publication of the next edition Finally the evidence for the validity of the tests and the recommendations for their appropriate use evolve as research accumulates and requires frequent updating to remain current For example there was a special issue of the Journal of Clinical Child and Adolescent Psychology published focusing on evidenced based assessment of the major forms of childhood psychopathology that will need to be integrated into the chapters in Part 3 This latter point reflects an important trend in the field that should influence the marketing of the book That is there are several initiatives being started in all of the major areas of applied psychology e g school clinical and counseling to promote evidenced based assessment practices These initiatives have all emphasized the need to enhance the training of graduate students in this approach to assessment This has been the orientation of this textbook from its first edition that is Clinical Assessment of Child and Adolescent Personality and Behavior has focused on using research to guide all recommendations for practice The ability of the textbook to meet this training need should be an important focus of marketing the book to training programs across all areas of applied psychology

Textbook Edition Scott Bellini, 2008 Building Social Relationships addresses the need for social skills programming for children and adolescents with autism spectrum disorders and other social difficulties by providing a comprehensive model that incorporates the following five steps assess social functioning distinguish between skill acquisition and performance deficits select intervention strategies implement intervention and evaluate and monitor progress The model describes how to organize and make sense of the myriad social skills strategies and resources available to parents and professionals It is not meant to replace other resources or strategies but to synthesize them into one comprehensive program Social Skills of Children and Adolescents Kenneth W. Merrell, Gretchen Gimpel, 2014-03-05 This scholarly yet highly readable and practical text systematically covers the importance development assessment and treatment of social skills of children and adolescents Combining scientific rigor with a highly approachable and readable style of writing to create a practical and unique book this

volume provides a comprehensive overview of the increasingly important topic of child and adolescent social skills. A wide variety of tables, figures, and practical step-by-step guides enhance the material presented, making it particularly useful for practitioners while offering an extensive array of recent research and models of interest to researchers. The authors present a solid foundation of scientific knowledge written in a manner accessible to nonscientists and having ample practical implications and examples for educational and clinical practice. The book is divided into two parts: the first features a foundation for conceptualizing and assessing child and adolescent social skills, whereas the second focuses on the arena of intervention. An up-to-date and unique addition to the literature, this volume will be of interest to professionals who work with or study children across several disciplines, including school and clinical child psychology, special education, counseling, and social work. Although many books and other professional materials on the social competence of children and adolescents are presently available, the knowledge regarding these social skills is expanding rapidly, and there is a tremendous need to keep it current. This book helps meet this need by not only synthesizing a great deal of recent work in the field but also by providing new information and evidence that has not yet been published. It also bridges an important gap that sometimes exists between research and practice. For instance, some books on child and adolescent social skills are clearly written for the academician or researcher and may have little apparent application for the clinician or practitioner. Other materials are written as practical assessment or intervention guides for the clinician/practitioner yet sometimes lack supporting evidence and rationale. This book is aimed at both arenas.

Behavioral, Social, and Emotional Assessment of Children and Adolescents Sara A. Whitcomb, 2013-05-07. Generally recognized as the standard work in its field, *Behavioral, Social, and Emotional Assessment of Children and Adolescents* provides a comprehensive foundation and guide for conducting conceptually sound, culturally responsive, and ecologically oriented assessments of student social and emotional behavior. It is aimed at graduate students, practitioners, and researchers in the fields of school psychology, child clinical psychology, and special education but will also be of interest to those in related disciplines such as counseling psychology, child psychiatry, and social work. Keeping intact many of the same premises and pedagogy of the previous editions, this revised and updated fourth edition has been reorganized to emphasize culturally responsive, reflective practice with added content including updated assessment tools and strategies to be used within a Response to Intervention (RtI) framework. In addition to updating all chapters to reflect current research and data, authors Sara Whitcomb and Kenneth Merrell move away from a more narrow view of social skills to reflect an expanded notion of strengths-based assessment, which includes such traits as coping skills, resilience, problem-solving ability, emotional knowledge, and empathy. Throughout, they strive to increase professional standards in the practice of psychological and educational assessment of children and adolescents.
