

Chapter 13

Economics and Politics

Author's Note

Chapter 13 presents a broad survey of the economy and politics. These two chapters are combined because, in many respects, they operate together.

Of all the societal institutions, the economy is presented first in the text, for the simple reason that the economy has the greatest effect on all the other spheres of life. To some degree, too, this ordering reflects changes in the discipline itself. Back in the 1970s, when functional theory was still dominant in our discipline, the family was typically placed first in the ordering of institutions (commonly followed by "religion," the other "symbolic" institution). The first few editions of this textbook did this. Decades later, a number of current textbooks *still* use the older ordering. But I think most of today's sociologists would agree that the economy has a far greater effect on the family than the family does on the economy. Therefore, dealing with economics and politics (or "political economy") should come first, followed by the other institutions.

The discussion of the economy has three major parts. The first sections of the chapter deal with changes to the economy caused by technological innovation (pp. 370–372).

- The Agrarian Revolution transformed the economy beginning about 5000 years ago.
- The Industrial Revolution transformed the economy beginning about 250 years ago.
- The Postindustrial Revolution began transforming the economy about 1950.
- Globalization is an additional factor that has transformed the geographical scale of the economy. This factor has been present for more than 500 years, but has accelerated during the last century.

The second major focus of this chapter is a comparative analysis of economic systems. Think of capitalism and socialism as two different claims about justice—that is, two different systems that provide answers to the questions "Who deserves what and why?"

- Capitalism rests on the operation of a market system (pp. 374–375).
- Socialism rests on central government control of the economy (pp. 375–376).
- Welfare capitalism and state capitalism represent models combining elements of both capitalism and socialism.

The third major focus of the chapter is an overview of the postindustrial U.S. economy. Key trends include:

- The declining share of the labor force in agricultural work (see Figure 13–2 on page 378).
- The declining share of the labor force in industrial work.
- The increasing share of the labor force in service work.
- A long-term decline in the share of workers in labor unions (pp. 378–379).
- A continuing high rate of unemployment in a "jobless recovery" (pp. 380–383).
