Thermal Energy Storage Composites Giulia Fredi, 2025-04-21 Thermal energy storage TES technologies are currently employed to store waste excess heat that can be released when and where needed thereby filling the gap between energy demand and availability Among the most widely used materials for TES are organic phase change materials PCMs such as paraffins poly ethylene glycol s and fatty acids and alcohols which absorb a large amount of latent heat at a nearly constant temperature and are thus suitable to keep the temperature in a specific range or under certain threshold useful for example in the thermal management TM of electronic devices The incorporation of these organic PCMs in polymer composites results in multifunctional materials suitable in those applications requiring high specific mechanical properties and heat management e g electric vehicles Although the PCMs generally decrease the mechanical properties of the host structural composites such multifunctional composite can still be beneficial in terms of mass saving compared to two monofunctional units performing the structural and heat management functions individually This book briefly introduces the concept of TES and PCMs with a special focus on organic solid liquid PCMs their confinement methods and their TM applications at low medium temperatures 0 C 100 C It then investigates the approach of embedding TES and TM functionalities in structural materials through the development of multifunctional polymer composites that could find applications where weight saving and temperature management are equally important The concept of structural TES composite will be presented through the description of some case studies

Hard X-ray and Gamma-ray Detector Physics VI Arnold Burger, Larry A. Franks, Ralph B. James, 2004 Proceedings of SPIE present the original research papers presented at SPIE conferences and other high quality conferences in the broad ranging fields of optics and photonics These books provide prompt access to the latest innovations in research and technology in their respective fields Proceedings of SPIE are among the most cited references in patent literature

Smart Polymers Asit Baran Samui, 2022-04-26 Smart materials have been produced by conceiving of the idea of materials systems having a fourth dimension To match advances in instrumentation efforts are being made to develop materials resulting in smart materials with enhanced performance In nature the action of stimuli responsive materials is reversible this idea has attracted interest for its potential research and industrial applications The challenge remains how to couple these applications with environmental consciousness This book presents the basics of smart polymers and describes their current and future applications This book is different from other books on the subject in that it explores polymer materials smart behavior in more depth covering vibration damping thermal and electrochemical energy sensing at trace level biotechnology and so on The 14 chapters in this book cover diverse areas including Photoresponsive polymers that can be manipulated using a specific frequency of light Designing polymers for vibration damping Smart manipulations of hydrophobic and super hydrophobic polymers Biopolymers including hydrogels for smart application drug delivery and other uses Smart paints Self healing and shape memory polymers Holography for data storage Phase change polymers and solid

polymer electrolytes for thermal and electrochemical energy Molecular imprinting polymers for sub ppm sensing and removal of unwanted materials Smart textiles and the concept of advanced textiles This book will be of particular interest to researchers postgraduates and industry experts It offers an extensive introduction to the basics of smart polymers and their possible applications

Intersociety Energy Conversion Engineering Conference ,1986 *Terahertz Spectroscopy* Susan L. Dexheimer,2017-12-19 The development of new sources and methods in the terahertz spectral range has generated intense interest in terahertz spectroscopy and its application in an array of fields Presenting state of the art terahertz spectroscopic techniques Terahertz Spectroscopy Principles and Applications focuses on time domain methods based on femtosecond laser sources and important recent applications in physics materials science chemistry and biomedicine The first section of the book examines instrumentation and methods for terahertz spectroscopy It provides a comprehensive treatment of time domain terahertz spectroscopic measurements including methods for the generation and detection of terahertz radiation methods for determining optical constants from time domain measurements and the use of femtosecond time resolved techniques The last two sections explore a variety of applications of terahertz spectroscopy in physics materials science chemistry and biomedicine With chapters contributed by leading experts in academia industry and research this volume thoroughly discusses methods and applications setting it apart from other recent books in this emerging terahertz field
