Margani,2019-06-11 The principle of sustainability should be strictly connected with safety since both aim to conserve resources in the case of sustainability the resources are typically thought of as environmental while in the case of safety the resources are basically human In spite of this common ground discussions on sustainability usually give insufficient attention to safety In the last years the EU has made large investments to increase the energy efficiency of the existing building stock paving the way for a low carbon future however less effort has been made to enhance its seismic resilience Therefore the safety and consequently the sustainability of towns situated in earthquake prone countries remain inadequate In such countries energy renovation actions should be combined with seismic retrofitting However a number of barriers considerably limit the real possibility of extensively undertaking combined retrofit actions especially for multi owner housing and high rise buildings These barriers are of different kinds technical e g unfeasibility and or ineffectiveness of conventional retrofit solutions financial e g high renovation costs insufficient incentives subsidies organizational e g occupants disruption and relocation renovation consensus by condominium ownerships and cultural social insufficient information and skills lack of adequate policy measures for promoting renovation actions This book aims to overcome these barriers and to bridge the gap between sustainability and safety so to conserve both human and environmental resources **Net Zero Energy Buildings**

Linda Reeder,2016-03-31 This book presents 18 in depth case studies of net zero energy buildings low energy building that generate as much energy as they consume over the course of a year for a range of project types sizes and U S climate zones Each case study describes the owner s goals the design and construction process design strategies measurement and verification activities and results and project costs With a year or more of post occupancy performance data and other project information as well as lessons learned by project owners and developers architects engineers energy modelers constructors and operators each case study answers the questions What were the challenges to achieving net zero energy performance and how were these challenges overcome How would stakeholders address these issues on future projects Are the occupants satisfied with the building Do they find it comfortable Is it easy to operate How can other projects benefit from the lessons learned on each project What would the owners designers and constructors do differently knowing what they know now A final chapter aggregates processes to engage in and pitfalls to avoid when approaching the challenges peculiar to designing constructing and owning a net zero energy building By providing a wealth of comparable information this book which will flatten the learning curve for designing constructing and owning this emerging building type and improve the effectiveness
