A Research Report based on an analysis of Service Quality of Sports Centre Md. Rajibul Hasan, 2013-01-22 Seminar paper from the year 2011 in the subject Business economics Offline Marketing and Online Marketing grade Distinction University of Lincoln course title language English abstract It is an immensely complex exercise to measure the quality of a service There are differences between product and service In case of product there are precise specifications such as length depth width weight color etc On the other hand a service can have several intangible or qualitative features In addition there are some expectations of the consumer regarding the service which can differ significantly based on a range of factors such as experience personal requirements and what other people may have said to them To determine the service quality Parasuraman Zeithaml and Berry 1994 have developed a methodology known as SERVQUAL which is a service quality questionnaire survey methodology SERVQUAL model suggested five dimensions of service quality They are reliability responsiveness tangibles empathy and assurance Experiences or perceptions and expectation are measured in SERVQUAL model and SERVQUAL model has been well used in retail surroundings Berry 1986 Brown et al 1993 Carmen 1990 Finn and Lamb 1991 Dabholkar et al 1996 including banking fast food dry cleaning Cronin and Taylor 1992 and health care Babakus and Mangold 1989 In diversified businesses as the technologically advanced industrial market Pitt et al 1992 and B2B business to business services Briesinger and Lambert 1990 include the application of the SERVQUAL However this model raises some doubts as to whether expectations are being assessed at all The gap measured by the SERVQUAL model between expectation and perception is uncertain as to whether this is an indication of initial expectation or how the service is continuously reevaluated whilst it is being executed or experienced Therefore SERVPERF model is proposed by Cronin and Taylor 1992 and this model eliminates expectation from the SERVQUAL and it measures the service quality based on service perception In this paper the SERVPERF model is used to measure the service quality of the sports centre

The SAGE Handbook of Quantitative Methodology for the Social Sciences David Kaplan, 2004-06-21 The SAGE Handbook of Quantitative Methodology for the Social Sciences is the definitive reference for teachers students and researchers of quantitative methods in the social sciences as it provides a comprehensive overview of the major techniques used in the field The contributors top methodologists and researchers have written about their areas of expertise in ways that convey the utility of their respective techniques but where appropriate they also offer a fair critique

Ebstein, Robert H. Belmaker, 2008-08-13 In the 1960's and 1970's personality and mental illness were conceptualized in an intertwined psychodynamic model Biological psychiatry for many unweaved that model and took mental illness for psychiatry and left personality to psychology This book brings personality back into biological psychiatry not merely in the form of personality disorder but as part of a new intertwined molecular genetic model of personality and mental disorder This is the beginning of a new conceptual paradigm This breakthrough volume marks the beginning of a new era an era made possible by the electrifying pace of discovery and innovation in the field of molecular genetics In fact several types of genome

maps have already been completed and today's experts confidently predict that we will have a smooth version of the sequencing of the human genome which contains some 3 billion base pairs. Such astounding progress helped fuel the development of this remarkable volume, the first ever to discuss the brand new and often controversial field of molecular genetics and the human personality. Questioning critical and strong on methodological principles, this volume reflects the point of view of its 35 distinguished contributors, all pioneers in this burgeoning field and themselves world-class theoreticians, empiricists, clinicians, developmentalists, and statisticians. For students of psychopathology and others bold enough to hold in abeyance their understandable misgivings about the conjunction of molecular genetics and human personality, this work offers an authoritative and up-to-date introduction to the molecular genetics of human personality. The book, with its wealth of facts, conjectures, hopes, and misgivings, begins with a preface by world-renowned researcher and author Irving Gottesman. The authors masterfully guide us through Chapter 1, principles and methods; Chapter 4, animal models for personality; and Chapter 11, human intelligence as a model for personality, laying the groundwork for our appreciation of the remaining empirical findings of human personality qua personality. Many chapters (6, 7, 9, 11, and 13) emphasize the neurodevelopmental and ontogenetic aspects of personality, with a major emphasis on the receptors and transporters for the neurotransmitters dopamine and serotonin. Though these neurotransmitters are a rational starting point, now the future undoubtedly will bring many other candidate genes that today cannot even be imagined, given our ignorance of the genes involved in the prenatal development of the central nervous system. Chapter 3 provides an integrative overview of the broad autism phenotype and as such will be of special interest to child psychiatrists. Chapters 5, 8, and 10 offer enlightening information on drug and alcohol abuse. Chapter 14 discusses variations in sexuality. Adding balance and mature perspectives on how all the chapters complement and sometimes challenge one another are Chapter 2, written by a major figure in the renaissance of the relevance to psychopathology of both genetics and personality; Chapters 15, 17, informed critical appraisals citing concerns and cautions about premature applications of this information in the policy arena; and Chapter 18, a judicious contemplation by the editors themselves of this promising and to some alarming field. Clear and meticulously researched, this eminently satisfying work is written to introduce the subject to postgraduate students just beginning to develop their research skills, to interested psychiatric practitioners, and to informed laypersons with some scientific background.

Nonlinear Dynamical Systems Analysis for the Behavioral Sciences Using Real Data

Stephen J. Guastello, Robert A.M. Gregson, 2016-04-19. Although its roots can be traced to the 19th century, progress in the study of nonlinear dynamical systems has taken off in the last 30 years. While pertinent source material exists, it is strewn about the literature in mathematics, physics, biology, economics, and psychology at varying levels of accessibility. A
