Student Exploration: Inclined Plane – Sliding Objects

Directions: Follow the instructions to go through the simulation. Respond to the questions and prompts in the orange boxes.

Vocabulary: acceleration, coefficient of friction, conservation of energy, friction, gravitational potential energy, inclined plane, kinetic energy, potential energy, velocity

Prior Knowledge Questions (Do these BEFORE using the Gizmo.) Two skiers are at the top of a mountain. Amanda decides to go down a steep trail that leads directly to the bottom. Brandon decides to take a longer, more gradual trail.

1. Assuming neither skier tries to slow down, who will reach the bottom first?
2. Who will be going faster at the bottom? Explain.

Amanda

Assuming the surface is frictionless and that neither skier tried to slow down, both the skiers would be traveling then at the same speed at the bottom of her trail. The skiers' potential energy is conserved so would equal the kinetic energy at the end. If there was friction, Brandon's kinetic energy would be less due to it becoming heat energy, and as a result then he'd have less speed.

Gizmo Warm-up

The two ski trails are examples of **inclined planes**. As objects move from the top of an inclined plane to the bottom, their **potential energy**, or energy of position, is converted into **kinetic energy**, or energy of motion. This process is explored in the *Inclined Plane – Sliding Objects* Gizmo.

To begin, check that **Ramp 1** has a **Steel block** on a **Frictionless ramp** with an **Angle** of 20° .

1. Click **Play** () . How does the block's speed change as it slides?

It accelerates, i.e. speeds up.

2. Select the **TABLE** tab and scroll to the bottom of the table.

A. What is the final **velocity** (v) of the block?

4.43 m/s

B. What is the **acceleration** (a) of the block?

3.36 m/s²

The acceleration of the block is equal to how much its velocity increases each second.
