Student Exploration: Populations and Samples

Vocabulary: frequency distribution, normal distribution, population, sample

1. How would you describe the shape of this distribution?

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

A **frequency distribution** indicates how many data points have each value or range of values. Suppose a large number of people were quizzed on how many U.S. state capitals they can name. The histogram to the right shows the frequency distribution of their results, with no studying.

In the blank graph at right, sketch what you think this frequency distribution might look like if the same people could study for 10 minutes before taking the quiz.

Gizmo Warm-up

In many cases, it is impractical to investigate every member of a **population**. Researchers often investigate a smaller **sample**, or subset, of the population. You can explore the accuracy of samples using the Populations and Samples Gizmo™.

The red and blue histograms in the Gizmo are approximations of the frequency distributions described above, U.S. state capitals named, with no studying (red) and with studying (blue).

What is the mean of each distribution? Red mean:

Blue mean:

Move the **Simulation speed** slider all the way to the left. Click **Play** () to start taking samples from each distribution. Click **Pause** () when the sample size n is about 10.

What is the mean of each sample? Red mean: _____

Blue mean: _____

How close are the sample means to the population means?

Get the Gizmo ready:

Activity A:

Sampling frequency distributions:

- Click **Reset** ().
- Check that the original distributions are shown.

(If not, click **Refresh** or **Reload** on your browser.) • Next to the bottom distribution, click, **Clear**.

Making Sense of Virtual Risks C. Harteveld,2012-11-29 Along with the rise of digital games over the past decades came an increased interest in using games for other purposes than entertainment Although a few successes are known much research seems to suggest little evidence for games advantages Existing literature claims that more comprehensive rigorous and innovative studies are needed to investigate the effective design and use of games To contribute to this emerging field the author investigated the case of Levee Patroller The target audience of this game levee patrollers are considered the eyes and ears of the Dutch water authorities They inspect levees and report any risks they encounter Similarly in the game players have to find all virtual failures in a region and report these If they do not find the failures in time or report them incorrectly it could result in a levee breach that floods the whole virtual region Using this game an innovative game based training was set

up to prove its effectiveness in training inspection knowledge and skills and to understand the contributing factors In total 147 levee patrollers from 3 water authorities in the Netherlands participated in a structured 3 week training which was evaluated using a quasi experimental design with a mix of quantitative and qualitative methods The results highlight a successful training Clear evidence was found that the patrollers improved on their inspection knowledge and skills But because how players perform in the game is most crucial for the game s success as a training tool future research should consider game design data and performance more elaborately
