

STUDENT MARK ANALYSIS SYSTEM

DATE:

AIM:

To create a system to analyze the students marks stored in the database.

PROBLEM STATEMENT:

The purpose of this system is to analyze and perform operation on data stored in the database and to provide authentication to avoid unauthorized access by using MS-Access as back end and VB to use as the front end. The entire system is divided into various modules and it has its own objects and classes.

Reports are provided on their basis:

Student marks
Average
Percentage

The main advantage in our system is that data entry becomes very easy and other manipulation, updating can be done easily.

Form description:

Form1: Login Form

Here the user name and password is checked and access is granted if the verified data is correct.

Form2: Student Profile Form

Here the detail of each student is entered and it is stored in the database. We can also search the details of a particular student and also make changes to the available data.

Form 3: Academic Details

Here the student name, register no, department and all the subject marks are entered and stored in the database. Finally, we are calculating the total, average and percentage for each student.

Software requirements:

Microsoft Visual Basic 6.0 is used as front- end for our project and MS-Access is used as back-end to store the data.
