Temporal Urban Design Filipa Matos

Wunderlich, 2023-12-19 *Temporal Urban Design* Temporality Rhythm and Place examines an alternative design approach focusing on the temporal aesthetics of urban places and the importance of the sense of time and rhythm in the urban environment The book departs from concerns on the acceleration of cities its impact on the urban quality of life and the liveability of urban spaces and questions on what influences the sense of time and how it expresses itself in the urban environment From here it poses the questions what time is this place and how do we design for it It offers a new aesthetic perspective akin to music brings forward the methodological framework of urban place rhythm analysis and explores principles and modes of practice towards better temporal design quality in our cities The book demonstrates that notions of time have long been intrinsic to planning and urban design research agendas and whilst learning from philosophy urban critical theory and both the natural and social sciences debate on time it argues for a shift in perspective towards the design of everyday urban time and place timescapes Overall the book explores the value of the everyday sense of time and rhythmicity in the urban environment and discusses how urban designers can understand analyse and ultimately play a role

from URBAN DESIGN to LANDSCAPE URBANISM Sariyya ARSLAN,Erkan POLAT,2025-04-16 Landscape Urbanism is a planning and design theory and a model of practice that argues that the best way to organize cities is through the design of the city s landscape rather than just the design of built or unbuilt areas In this context it is positioned within larger scale cultural historical and theoretical formations Landscape Urbanism is a response to the limited perception or depiction of the current project and site context by both Urban Planners and Architects and Landscape Architects It is also a concept that has been strategically introduced by these design and planning oriented professions and jobs especially in terms of Urban Design as a way to differentiate the context and is used more in a Western oriented way and has been put forward as a response to the increasingly undefined role that Landscape Architects find themselves in Landscape Urbanism describes the ability to produce urban effects that have traditionally been achieved through the construction of buildings on built up areas simply through the organization of horizontal surfaces Although first coined in the mid 1990s the term Landscape Urbanism has adopted many different uses but is most often associated with Urban Design and as a Postmodernist or even New Modernist response to the spatial scale failures of the New Urbanism the departure from comprehensive visions and demands for Modern architecture and Urban Planning

Cognition and the Built Environment Ole Möystad,2017-12-12 *Cognition and the Built Environment* argues that interacting with our built environment as users and as architects is a cognitive process It claims that architecture in its form and meaning is a basic embodied level of human cognition The assumption is that we and our built environment together

form an intelligent system a cognitive feedback loop between us and the world of which we are part With this as a vantage point the book discusses the meaning and intelligence of concrete architectural environments as well as the agency of the architect of his client and of the user The inquiry oscillates between abstract thought topological models and cognitive semiotics between pragmatist philosophy and the professional practice of planning cities developing projects and using objects Architecture serves more complex purposes than our caves paths and landmarks did Written for students and academics of urban design urban planning and architectural theory Cognition and the Built Environment argues that human cognition feeds on the interaction between thought agency and built environment and that architecture is the spatial form of this interaction

Life-Destroying Diagrams Eugenie Brinkema, 2022-01-14 In *Life Destroying Diagrams* Eugenie Brinkema brings the insights of her radical formalism to bear on supremely risky terrain the ethical extremes of horror and love Through close readings of works of film literature and philosophy she explores how diagrams grids charts lists abecedaria toroids tempos patterns colors negative space lengths increments and thresholds attest to formal logics of torture and cruelty violence and finitude friendship and eros debt and care Beginning with a wholesale rethinking of the affect of horror orienting it away from entrenched models of feeling toward impersonal schemes and structures Brinkema moves outward to consider the relation between objects and affects humiliation and metaphysics genre and the general bodily destruction and aesthetic generation geometry and scenography hatred and value love and measurement and ultimately the tensions hazards and speculative promise of formalism itself Replete with etymological meditations performative typography and lyrical digressions *Life Destroying Diagrams* is at once a model of reading without guarantee and a series of generative experiments in the writing of aesthetic theory

Deklinacja odnowy miast, 2012 **The Experimental City** James Evans, Andrew Karvonen, Rob Raven, 2016-05-20 This book explores how the concept of urban experimentation is being used to reshape practices of knowledge production in urban debates about resilience climate change governance and socio technical transitions With contributions from leading scholars and case studies from the Global North and South from small to large scale cities this book suggests that urban experiments offer novel modes of engagement governance and politics that both challenge and complement conventional strategies The book is organized around three cross cutting themes Part I explores the logics of urban experimentation different approaches and how and why they are deployed Part II considers how experiments are being staged within cities by whom and with what effects Part III examines how entire cities or groups of cities are constructed as experiments This book seeks to contribute a deeper and more socially and politically nuanced understanding of how urban experiments shape cities and drive wider changes in society providing a framework to examine the phenomenon of urban experimentation in conceptual and empirical detail

a critique of the status quo and an innovative way forward for the urban future Cities in Time aims to explore and understand the phenomenon offering a first critical and theoretical evaluation of temporary urbanism and its implications for the present and future of our cities The book argues that temporary urbanism needs to be understood within the broader context of how different concepts of time are embedded in the city In any urban place multiple discordant and diverse timeframes are at play and the chapters here explore these different conceptions of temporality their causes and their effects Themes explored include how institutionalised time regulates everyday urban life how technological and economic changes have accelerated the city's rhythms our existential and personal senses of time concepts of memory and identity virtual spaces ephemerality and permanence

Emergent Spatio-temporal Dimensions of the City Fabian Neuhaus, 2015-01-05 This book focuses on the creation of space as an activity The argument draws not only on aspects of movement in time but also on a cultural and specifically social context influencing the creation of the spatial habitus The book reconsiders existing theories of time and space in the field of

urban planning and develops an updated account of spatial activity experience and space making Recent developments in spatial practice specifically related to new technologies make this an important and timely task Integrating spatial temporal dynamics into the way we think about cities aids the implementation of sustainable forms of urban planning The study is composed of two different case studies One case is based on fieldwork tracking individual movement using GPS the other case utilises data mined from Twitter One of the key elements in the conclusion to this book is the definition of temporality as a status rather than a transition It is argued that through repetitive practices as habitus time has presence and agency in our everyday lives This book is based on the work undertaken for a PhD at the Centre for Advanced Spatial Analysis and was and accepted as thesis by University College London in 2013
