Points, Lines, and Planes

Name Points, Lines, and Planes In geometry, a **point** is a location, a **line** contains points, and a **plane** is a flat surface that contains points and lines. If points are on the same line, they are **collinear**. If points are on the same plane, they are **coplanar**.

Example: Use the figure to name each of the following.

a. a line containing point A

The line can be named as ℓ . Also, any two of the three points on the line can be used to name it.

$\overline{AB}$, $\overline{AC}$, or $\overline{BC}$

b. a plane containing point D

The plane can be named as plane N or can be named using three noncollinear points in the plane, such as plane ABD , plane ACD , and so on.

Exercises

Refer to the figure.

1. Name a line that contains point A .
2. What is another name for line m ?
3. Name a point not on $\overline{AC}$.
4. What is another name for line ℓ ?
5. Name a point not on line ℓ or line m .

Draw and label a figure for each relationship.

6. $\overline{AB}$ is in plane Q .
7. $\overline{ST}$ intersects $\overline{AB}$ at P .
8. Point X is collinear with points A and P .
9. Point Y is not collinear with points T and P .
10. Line ℓ contains points X and Y .

Kerckhoffs,2010-09-03 Peter Hunter Computational physiology for the cardiovascular system is entering a new and exciting phase of clinical application Biophysically based models of the human heart and circulation based on patient specific anatomy but also informed by population atlases and incorporating a great deal of mechanistic understanding at the cell tissue and organ levels offer the prospect of evidence based diagnosis and treatment of cardiovascular disease The clinical value of patient specific modeling is well illustrated in application areas where model based interpretation of clinical images allows a more precise analysis of disease processes than can otherwise be achieved For example Chap 6 in this volume by Speelman et al deals with the very difficult problem of trying to predict whether and when an abdominal aortic

aneurysm might burst This requires automated segmentation of the vascular geometry from magnetic resonance images and finite element analysis of wall stress using large deformation elasticity theory applied to the geometric model created from the segmentation The time varying normal and shear stress acting on the arterial wall is estimated from the arterial pressure and flow distributions Thrombus formation is identified as a potentially important contributor to changed material properties of the arterial wall Understanding how the wall adapts and remodels its material properties in the face of changes in both the stress loading and blood constituents associated with inflammatory processes IL6 CRP MMPs etc
